

AWS re:Invent

DECEMBER 1 – 5, 2025 | LAS VEGAS, NV

AWS Financial Services Attendee Guide

© 2025, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Introduction

On behalf of the AWS Financial Services team, welcome to re:Invent 2025. Whether this is your first time attending or you've joined us in the past, we're grateful that you've chosen to invest your time with us. Our team is dedicated to ensuring that we maximize the return on your investment as you spend your week at re:Invent.

This guide contains a curated list of recommended breakout sessions, led by your industry peers, that are specifically intended for financial professionals. It also points you to hands-on technical sessions led by members of the AWS Financial Services team as well as recommendations for additional sessions relevant to the Financial Services industry.

As always, we look forward to seeing you in Las Vegas. In the meantime, be sure to keep an eye on the [AWS for Financial Services website](#) and follow us on our [LinkedIn page](#) to stay up to date on all things Financial Services at re:Invent.

Scott Mullins

Managing Director, Financial Services,
Amazon Web Services

Let's get started

This guide is full of tips and tricks provided by re:Invent veterans and staff to make sure you're ready for this year's event.

AWS re:Invent attendees should expect to:

- Learn firsthand about AWS services from recognized experts
- Get technical questions answered on the spot
- Receive immediate access to what's new
- Most of all, enjoy yourself while learning!

Get ready to reserve your seat for your favorite sessions. Reserved seating is now open.

Register now

We've curated the resources in this guide to help you plan a successful agenda. View the quick links below to get started:

Keynotes

(Schedule subject to change)

[Learn more](#)

CEO Keynote

Matt Garman
CEO, AWS

Tues, Dec 2 | 8:00 AM – 10:30 AM

Agentic AI & Data Foundations Keynote

Swami Sivasubramanian
VP, Agentic AI, AWS

Weds, Dec 3 | 8:30 AM – 10:30 AM

Partnership Advantage Keynote

Dr. Ruba Borno
VP, Global Specialists and Partners, AWS

Weds, Dec 3 | 3:00 PM – 4:30 PM

Infrastructure and Service Innovation Keynote

Peter DeSantis
SVP, Utility
Computing, AWS

Dave Brown
VP, Compute and Machine
Learning Services, AWS

Thurs, Dec 4 | 9:00 AM – 10:30 AM

Developer Keynote

Dr. Werner Vogels
CTO, Amazon.com

Thurs, Dec 4 | 3:30 PM – 4:30 PM

Session types

Breakout sessions

Lecture-style sessions that feature one or more speakers presenting on an educational topic. Lectures are in either standard breakout rooms or on a silent session stage. Breakout sessions in standard rooms include an optional group Q&A at the end, as time allows.

Workshops

Hands-on sessions where attendees work under the guidance of AWS experts to build a solution using AWS. Each workshop starts with a short lecture by the speaker, followed by solution-focused building support. Attendees must bring their laptops to participate.

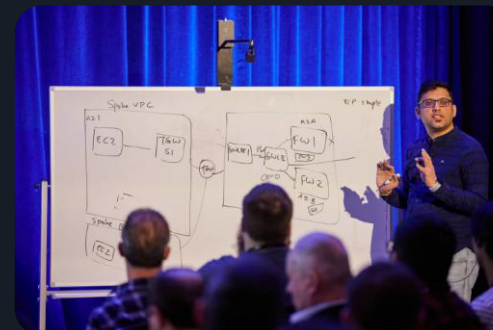

Builders' sessions

Small-group sessions led by one AWS expert providing interactive learning on how to build on AWS. Each builders' session begins with a short explanation or demonstration of what attendees are building. There is no formal presentation; once the demonstration is complete, attendees use their own laptops to experiment and build with guidance from the AWS expert. You must bring your own laptop to participate in this session.

Code talks

Engaging, code-focused sessions with a small audience. AWS experts lead an interactive discussion featuring live coding and/or code samples as they explain the "why" behind AWS solutions. Attendees are encouraged to ask questions and follow along.

Chalk talks

Chalk talks are highly interactive whiteboarding sessions with AWS experts. Expect a lively technical discussion, centered around real-world architecture challenges, with a small group of experts and peers. These sessions run for 60 minutes.

FSI Innovation talk

INV209: The next frontier: Building the agentic future of Financial Services

AI agents have made financial institutions more productive, efficient, and secure. But a more autonomous financial system—defined by innovations like inter-agent payments, real-time underwriting, hyper-personalized customer service, and customized lending offers—represents the industry's next frontier. This session explores how we will get there...and beyond. After outlining a vision for the agentic future of Financial Services, we'll hear from two customers who will share how they are building the infrastructure for AI systems that independently execute complex financial operations. We'll learn how they are architecting these systems for compliance and scalability and what it takes to run autonomous agents in production.

Wednesday, Dec 3, 2:30 PM - 3:30 PM PST
Venetian | Level 5 | Palazzo Ballroom B

ACT100

J.P. Morgan presents ACQUIRED at AWS re:Invent

Ben Gilbert and David Rosenthal, co-hosts of Acquired—the #1 technology show on Spotify and Apple Podcasts—take the stage with special guests including Max Neukirchen, Global Co-Head, J.P. Morgan Payments, Aravind Srinivas, Co-founder & CEO, Perplexity AI, and AWS CEO Matt Garman to discuss AI and the future of cloud computing. Dive deep into topics like digital transformation in the age of agentic AI, how to maintain innovation at scale, and the role AWS plays in helping companies emerge as AI leaders and innovators. Additional speakers to be announced soon.

NO RESERVED SEATING – WALK UP ONLY

Add to your
schedule

Thursday, Dec 4, 11:00 AM to 1:00 PM PST
The Venetian | Level 2 | Venetian Theatre

WITH SPECIAL GUESTS

Matt Garman
CEO, AWS

Max Neukirchen
Global Co-Head,
J.P. Morgan Payments

Aravind Srinivas
Co-founder & CEO,
Perplexity AI

INDUSTRIES PAVILION EXPO

AWS for Financial Services

The Industries Pavilion in the Expo Hall will showcase why AWS is the best cloud for Financial Services. Experience interactive demos showcasing the latest AWS services and see how financial institutions are achieving groundbreaking transformations with cloud and AI technologies. Industry experts will demonstrate how AWS helps drive innovation across Banking, Capital Markets, Insurance, and Payments.

LOCATION :

Expo Hall, [The Venetian](#)

SCHEDULE :

Monday, December 1: 4:00 PM – 7:00 PM | Welcome reception

Tuesday, December 2: 10:00 AM – 6:00 PM

Wednesday, December 3: 10:00 AM – 6:00 PM | Happy Hour 4:30 PM – 6:00 PM

Thursday, December 4: 10:00 AM – 4:00 PM

FEATURED AWS PARTNER

AWS for Financial Services

Mphasis is a global IT solutions provider specializing in Financial Services. We lead with design and architecture to deliver next-gen offerings that blend deep domain expertise with generative AI and cutting-edge tech - helping top Banks and Insurers modernize, scale, and innovate.

ATTEND OUR SESSION

Explore how Mphasis is driving modernization using Mphasis' Agentic AI framework.

MAM219-S: Driving modernization using Mphasis Agentic AI framework (Lightning talk)

Public View	Session Title	Attendee View
IND392	Fine-tuning models for accuracy and latency at Robinhood Markets	IND392
IND3300	Stripe: Revolutionizing compliance workflows with agentic infrastructure	IND3300
IND3301	Ripple: Building an intelligent, multi-agent system for 24/7 operations	IND3301
IND3302	Building Prudential's microagent platform with MCP and A2A on AWS	IND3302
IND3303	Moody's: Architecting a multi-agent system on AWS	IND3303
IND3304	Maximizing uptime: Itaú's mission-critical mainframe migration to AWS	IND3304
IND3305	LSEG: Transforming market intelligence at massive scale	IND3305
IND3306	From fragmented to unified platform: Rocket Companies data and AI journey	IND3306
IND3308	Capital One: Building resilient systems by engineering for five nines	IND3308
IND3312	Scaling support, compliance, and productivity with conversational AI at Coinbase	IND3312
IND3313	Secure in milliseconds: Visa's AI-powered fraud defense on AWS	IND3313
IND3315	Trading innovation: Jefferies' AI assistant on Amazon Bedrock (Lightning talk)	IND3315
IND3318	FIS: High-performance instant payment processing at massive scale	IND3318
IND3319	Mastercard: How to protect sensitive data in real-time applications	IND3319
IND3320	Accelerating AI: How Sun Life reduces latency and enhances engagement	IND3320
IND3321	How Allianz designed AIOps at enterprise scale	IND3321
IND3322	From enterprise data mesh to AI with Amazon SageMaker Unified Studio	IND3322
IND3323	Fidelity Investments: Text-to-SQL for data analytics at enterprise scale (Lightning talk)	IND3323
AIM114-S	Exploring dual pathways to agentic commerce with AWS and Stripe (sponsored by Stripe) (Lightning talk)	AIM114-S
AIM120-S	Transforming banking: NatWest's journey to enhanced customer experience (sponsored by Accenture)	AIM120-S
AIM124-S	Modernizing KYC process using agentic AI (featuring Crédit Agricole CIB) (sponsored by Capgemini)	AIM124-S
AIM209	Scaling AI with confidence: From proof of concept to production (featuring CDL) (sponsored by Dynatrace)	AIM209
AIM213-S	Transforming Lincoln Financial's gen-AI powered CX with AWS & Deloitte (sponsored by Deloitte)	AIM213-S
AIM258-S	Live hallucination detection in prod with LaunchDarkly's AI Configs (sponsored by LaunchDarkly)	AIM258-S
AIM263-S	AI agents with Amazon Nova Sonic: Vonage for Financial Services (spons. by Vonage) (Lightning talk)	AIM263-S
AIM273-S	Building a cloud-native risk decisioning platform for resilience (sponsored by PwC) (featuring Capital One)	AIM273-S
AIM276-S	GenAI in private equity: Moving from pilots to performance (sponsored by PwC)	AIM276-S
AIM279-S	FINRA: Accelerate massive data processing with NVIDIA on AWS EMR (sponsored by NVIDIA) (Lightning talk)	AIM279-S

Public View	Session Title	Attendee View
AIM280-S	Building enterprise-ready agentic speech AI pipelines on AWS (sponsored by NVIDIA)	AIM280-S
AIM282-S	Building scalable agentic AI solutions with AWS (sponsored by Capital One)	AIM282-S
AIM3307-S	Building the future trading platform leveraging AI and AWS (sponsored by Cognizant) (featuring LPL Financial)	AIM3307-S
AIM3317-S	The next frontier in financial systems: Transformer-based foundation models (spons. by NVIDIA)	AIM3317-S
ANT102-S	Modernizing wealth management with cloud + AI use cases (sponsored by Incedo Inc) (Lightning talk)	ANT102-S
ANT203	Enabling AI innovation with Amazon Sagemaker Unified Studio	ANT203
ANT402	Build an end-to-end fraud detection system with Amazon SageMaker Unified Studio	ANT402
ARC404	Building resilient multi-Region applications with Capital One	ARC404
BIZ216	Redefining service excellence: Canada Life's AI-powered contact center	BIZ216
BIZ220	Modernizing contact centers in Financial Services with Amazon Connect (featuring Zepz)	BIZ220
BIZ223	Research agents in action: From complex business challenge to trusted insights (featuring Principal Financial)	BIZ223
CMP327	JPMC and Amazon Advanced Solutions Lab drive quantum R&D on Braket	CMP327
CMP409	It's about time! Improving distributed systems with Amazon Time Sync (featuring Nasdaq)	CMP409
CNS342	Navigate cloud compute with Fargate and ECS Managed Instances (featuring QRT)	CNS342
COP213-S	Solving the cloud privilege problem at scale: A Fiserv case study (sponsored by Sonrai Security)	COP213-S
COP340	Building reliable operations, featuring Fannie Mae	COP340
COP358	Multi-Region disaster recovery & resilience testing (featuring Fidelity)	COP358
DAT318	Web3 + AI: Agents that mean business (featuring Coinbase)	DAT318
DEV326	Anti-money laundering multi-agent orchestration with AWS Strands	DEV326
DVT104-S	How enterprises are pioneering innovation and DevOps (sponsored by Harness, Inc)	DVT104-S
DVT206-S	Transforming observability: Ripple's journey with Grafana on AWS (sponsored by Grafana Labs)	DVT206-S
GBL301	Toss securities' AI transformation with automated super app ops.	GBL301
GBL302	Beyond fine-tuning: Agentic AI for HFT quantitative analytics	GBL302
HMC201	Architecting resilient multicloud operations, featuring Monzo Bank	HMC201
HMC324	BCC: Hybrid architecture for generative AI to meet regulatory needs (Lightning talk)	HMC324
IND101-S	Reliable AI at scale: How data + AI observability powers AI products with AWS (sponsored by Monte Carlo) (Lightning talk)	IND101-S
IND215-S	Scaling data transformation w/ dbt & Nasdaq: Unlocking enterprise power global markets (spons. dbt Labs) (Lightning talk)	IND215-S
IND217-S	Fast and compliant CI/CD pipelines in the financial industry (sponsored by Octopus Deploy) (Lightning talk)	IND217-S
IND372-S	Reinventing credit origination process through AI (sponsored by Cloudera) (Lightning talk)	IND372-S
MAM205	Derisk your mainframe exit with agentic AI-powered refactoring ft BMW & Fiserv	MAM205
MAM206	LSEG's migration & modernization journey: Blueprint for cloud success	MAM206
MAM207	Reimagine mainframe workloads at speed with agentic AI - featuring Itaú & ADP	MAM207

MAM218-S	PwC & BMO: AI in Risk & Finance- elevating MD&A to treasury insights (sponsored by PwC) (Lightning talk)	MAM218-S
MAM221-S	Architecting trusted genAI and agentic experiences in Financial Services (sponsored by Coveo) (Lightning talk)	MAM221-S
PEX301	Agentic AI solutions for Financial Services & insurance with AWS	PEX301
SEC203	State of the art: AWS data protection in 2025 (featuring Vanguard)	SEC203
SEC215	Last HSM standing: Zettle by PayPal's move to AWS Payment Cryptography (Lightning talk)	SEC215
SEC216-S	Seamless network-based fraud protection for fintech & digital business (spons. by Vonage) (Lightning talk)	SEC216-S
SEC224	Infrastructure protection at scale with AWS Security, featuring Block, Inc	SEC224
SEC225-S	Securing data for your AI workloads with tokenization (sponsored by Capital One)	SEC225-S
SMB205	Learn how Riskspan is transforming private credit market using GenAI (Lightning talk)	SMB205
SMB305	Maximize ROI: How Octus migrated CreditAI from Azure to Amazon Bedrock	SMB305
SPS310	Commonwealth Bank of Australia reimagines modernization via agentic AI	SPS310
SPS312	Modernizing global payment processing: Moving from mainframe to AWS (featuring Global Payments)	SPS312
SPS318	Fidelity's AI-powered support analysis system	SPS318
SPS321	How Yahoo! Finance built research multi-agent systems with Gen AI	SPS321
WPS201	Architecting large-scale migrations at the NSA, Fannie Mae, and DCSA	WPS201
WPS317	Secure AI agents delivering efficiency in regulated industries (featuring Sicoob)	WPS317

Chalk talks

IND301	Architect petabyte-scale observability with OpenSearch and Amazon Q	IND301
IND315	Do's and don'ts for mission-critical workloads in Financial Services	IND315
IND317	Financial Services multi-Region design patterns and best practices	IND317
IND324	Simplify fraud investigation with Strands Agents and Amazon Nova Sonic	IND324
IND333	Accelerate financial products from idea to market with AI agents	IND333
IND341	Behind the curtain: Generative AI observability in Financial Services	IND341
IND345	Building privacy-aware generative AI applications for Financial Services	IND345
IND346	Building vertical AI agent blueprints in Financial Services	IND346
IND348	Create a secure card management platform with AWS Payment Cryptography	IND348
IND350	Chaos detective: Deploy generative AI-powered troubleshooting agents	IND350
IND351	Design a multi-expert system for fraud investigation with AI agents	IND351
IND356	Mastering data chaos: Enterprise-scale catalogs for Financial Services	IND356
IND359	Navigating multi-Region AWS database choices for Financial Services	IND359
IND361	Scaling document intelligence: Advanced patterns with Amazon Bedrock	IND361
IND362	Scaling enterprise data operations with Amazon SageMaker Unified Studio	IND362

Public View	Session Title	Attendee View
IND365	Unifying data platforms for generative AI-ready financial systems	IND365
IND373	Agentic KYC: Autonomous customer screening for financial institutions	IND373
IND374	Architecting multi-agent systems: Patterns in Financial Services	IND374
IND375	Best practices for optimizing Financial Services application latency	IND375
IND376	Financial Services LLMOps: Scaling pilots to production	IND376
IND301	Architect petabyte-scale observability with OpenSearch and Amazon Q	IND301
AIM376	Advanced document processing with increased accuracy and compliance	AIM376
API319	Processing payments with real-time serverless architectures	API319
CMP205	Quantum solutions driving enterprise value: From security to finance	CMP205
COP210	A practical guide for meeting regulatory resilience requirements	COP210
DAT317	Microseconds matter: Architect ultra-low latency trading platforms	DAT317
HMC402	Meet ultra-low latency and high throughput needs with AWS Outposts	HMC402

Workshops

IND338	Automate analysis and extract intelligence from financial datasets	IND338
IND342	Build a multi-agent financial research assistant with Amazon Bedrock	IND342
IND347	Combat financial document fraud with a multi-agent system	IND347
AIM413	Multi-agent financial fraud detection with Amazon Nova Models	AIM413
AIM415	Smart agents meet documents: Building next-gen IDP architectures	AIM415
DAT448	Build a stablecoin payment processor using AWS serverless services	DAT448
MAM351	Implement low-code agentic finance analytics for SAP	MAM351

Builders' and other interactive sessions

IND334	Agent in an hour: Build an agentic app with Strands Agents and MCP	IND334
IND344	Building multi-Region financial transaction systems with Aurora DSQL	IND344
IND353	Documents to decisions: Agentic underwriting with Amazon Bedrock	IND353
AIM337	Agentic AI for member-owned financials: Systems that serve	AIM337
ANT408	Data analytics for financial organizations with Amazon SageMaker	ANT408
ANT415	Securely monetize your data with Amazon Redshift	ANT415
CMP406	HPC infrastructure for Financial Services using AWS Batch and AWS CDK	CMP406
CNS325	Master distributed transactions: Orchestration with AWS Step Functions	CNS325
DAT407	Create an intelligent banking agent using Aurora DSQL & MCP	DAT407
DAT457	Autonomous Web3 agents on AWS	DAT457
TNC318	Deploy agentic AI application with Strands and MCP on Amazon EKS	TNC318

IND392

Fine-tuning models for accuracy and latency at Robinhood Markets

Public View

Attendee View

Discover how Robinhood enhanced their AI performance using Amazon SageMaker and Amazon Bedrock to optimize large language models (LLMs). This solution achieved 80% lower latency on key agentic tasks while scaling to millions of tokens per minute. Learn practical techniques for fine-tuning foundation models with Amazon SageMaker and implementing high-performing inference on Amazon Bedrock. This session covers model selection, optimization strategies, and deployment best practices for teams looking to improve their AI applications on AWS.

Breakout session

Featured speakers: **Nikhil Singhal**, Sr. Staff Engineer, AI/ML, Robinhood Markets; **Davide Giovanardi**, Staff Engineer, AI/ML, Robinhood Markets; **Viraj Padte**, Senior Solutions Architect, AWS

IND3300

Stripe: Revolutionizing compliance workflows with agentic infrastructure

Public View

Attendee View

Financial services companies struggle to scale Enhanced Due Diligence (EDD) processes while maintaining quality as merchant volumes grow. Learn how Stripe revolutionized compliance operations by building Eddie (EDD Detective)—an AI agent built on Amazon Bedrock that automates complex merchant risk assessments, reducing case handling time by 70% and enabling analysts to review 3x more cases. Discover how they built reliability and observability into agent operations, handling thousands of investigations daily while ensuring accuracy of AI-generated insights. Explore architectural patterns for orchestrating multi-step workflows, implementing human-in-the-loop validation, and maintaining audit trails at scale.

Breakout session

Featured speakers: **Chrissie Cui**, Engineering Manager of Managers, ML Data, Observability and Agentic Infrastructure, Stripe; **Christopher Phillippi**, Staff Data Scientist, Stripe; **Hasan Tariq**, Principal Solutions Architect, AWS

IND3301

Ripple: Building an intelligent, multi-agent system for 24/7 operations

Public View

Attendee View

Financial institutions face challenges analyzing massive log volumes, requiring hours or days of manual review for critical incidents. Learn how Ripple is building an automated, multi-agent system using Amazon Bedrock AgentCore and the Strands Agents framework to process 30-50GB of daily logs in minutes. Explore architectural patterns for integrating Amazon CloudWatch, AWS Lambda, Amazon S3, and Amazon OpenSearch to correlate log entries with codebase sections. Discover approaches for designing specialized agents that create conversational user interfaces for guided investigations. See how this system transforms blockchain operations and walk away with strategies for implementing a scalable foundation for building multi-agent applications.

Breakout session

Featured speakers: **Vijay Khanna Raviraj**, Senior Engineering Manager, RippleX; **Hari Vignesh Rajendran**, Staff Software Engineer, Data Platform, Ripple; **Aman Tiwari**, Solutions Architect, AWS

IND3302

Building Prudential's microagent platform with MCP and A2A on AWS

[Public View](#)[Attendee View](#)

Enterprises are exploring ways to scale their AI agent implementations beyond initial use cases. Learn how Prudential Financial is moving beyond single-purpose deployments with a scalable, microagent architecture powered by Amazon Bedrock and MCP agent-to-agent (A2A) communication. Prudential will share how their financial advisor assistant became the foundation for an enterprise multi-agent system, supporting diverse scenarios through modular design, independent scaling, and seamless deployment on AWS. Whether you're exploring AI agents for specific business needs or building a foundation for enterprise-wide adoption, walk away with patterns and best practices for scaling AI agents.

Breakout session

Featured speakers: **Rohit Kapa**, VP Data Science Lead, Prudential; **Subir Das**, Director, Machine Learning Engineer, Prudential Financial; **Mun Kim**, Machine Learning Engineer, AWS

IND3303

Moody's: Architecting a multi-agent system on AWS

[Public View](#)[Attendee View](#)

Financial institutions need to orchestrate specialized analysis across diverse domains while maintaining regulatory compliance and performance at scale. Learn how Moody's built their Research Assistant using domain agents for ratings, climate, and economics; task agents for KYC screening and company credit assessment; and workflow agents for sales and marketing and portfolio monitoring with early warning signals on Amazon Bedrock. Explore architectural patterns for multi-agent coordination using Amazon DynamoDB, Amazon Aurora PostgreSQL, AWS Lambda, and Amazon ECS that accelerated insights by 60% and reduced task completion by 30%. Discover approaches to agent specialization and knowledge retrieval that ensure compliance while processing complex financial datasets.

Breakout session

Featured speakers: **Dennis Climent**, Senior Director of Software Engineer, Moody's; **Samuel Baruffi**, Principal Solutions Architect, AWS

IND3304

Maximizing uptime: Itaú's mission-critical mainframe migration to AWS

[Public View](#)[Attendee View](#)

Dive deep into Itaú Bank's implementation for migrating core banking authorization from mainframe to AWS, targeting 1,000 TPS per account with sub-100ms latency. As one of Latin America's largest banks serving 70 million clients and processing 100 million daily transactions, Itaú will share advanced Amazon DynamoDB optimization strategies, partitioning patterns, and anti-patterns. Learn practical solutions for managing concurrent transactions through exclusive threading models, cell-based architecture with account sharding, and distributed consistency approaches for high-volume financial workloads. We'll examine techniques for maintaining 99.99% uptime while ensuring transaction accuracy and balance consistency, and explore parallel system validation strategies for seamless migration execution.

Breakout session

Featured speakers: **Edinei Piovesan**, Principal Engineer, Itaú Bank; **Wilson de Oliveira**, Head of Engineering, Itaú Bank; **Eduardo Bortoluzzi**, Senior Delivery Consultant, Application Modernization, AWS

IND3305

LSEG: Transforming market intelligence at massive scale

Public View

Attendee View

London Stock Exchange Group (LSEG) processes over 220 billion market data updates daily across 575+ global exchanges, forming the backbone of global financial markets. Learn how LSEG built their Matrix Signals Platform—a serverless architecture that detects patterns and anomalies across billions of messages. Explore their historical data migration to Amazon S3, development of a cloud-native real-time market data delivery platform, and implementation of sophisticated analytics with AWS Glue, Amazon Athena, and Amazon Bedrock. Discover how LSEG overcame cost-optimization challenges at petabyte scale, maintained consistency across 34 sites, and achieved a 5x cost reduction while improving anomaly detection from days to minutes.

Breakout session

Featured speakers: **Jason West**, Group Director, Real-Time Customer & LSEG Managed Distribution Services, LSEG; **Ed Johnston**, Real-Time Architect, LSEG; **Rohit Singh**, Senior Solutions Architect, AWS

IND3306

From fragmented to unified platform: Rocket Companies data and AI journey

Public View

Attendee View

Enterprises seek to unify data access across the organization, safeguard sensitive client information, and scale MLOps efficiently. Learn how Rocket Companies addressed these challenges by building a unified data and AI platform on AWS. Discover how Rocket leveraged Amazon SageMaker for machine learning workflows, integrated with custom Amazon EKS applications and CI/CD pipelines, and implemented MLflow for model governance. See how Amazon DataZone can support secure enterprise-wide metadata management. Join this session to explore architectural patterns for data democratization, combined with MLOps excellence, showcasing practical solutions that streamline data and machine learning workflows while maintaining security controls.

Breakout session

Featured speakers: **Garima Sharma**, VP, Engineering, Rocket Companies; **Ilia Fischer**, Director, Platform Experience, Rocket Companies; **Sajjan AVS**, Senior Solutions Architect, AWS

IND3308

Capital One: Building resilient systems by engineering for five nines

Public View

Attendee View

99.999% availability—less than five minutes of downtime per year—is the gold standard for mission-critical applications. This session dives deep into architectural strategies to achieve such availability using AWS. We'll explore fault-tolerant patterns such as multi-Region deployments, active-active failover, circuit breakers, bulkheads, chaos testing, and event-driven designs. Learn how services like Amazon S3, Amazon DynamoDB Global Tables, and AWS Lambda can eliminate single points of failure. We'll cover SLAs, SLOs, and engineering observability and automation to detect and respond to failures within milliseconds. Case studies and practical design guidance make this session ideal for architects and engineers building for extreme reliability.

Breakout session

Featured speakers: **Arunkumar Ganesan**, Distinguished Engineer, **Sobhan Mupparaju**, Senior Director, Software Engineering; **Enrique Bastante**, Senior Customer Solutions Manager, AWS

IND3312

Scaling support, compliance, & productivity with conversational AI at Coinbase

Public View

Attendee View

Discover how Coinbase transformed customer support, compliance automation, and employee productivity using a unified AI platform powered by Amazon Bedrock. This multi-layered system integrates knowledge bases, real-time tool execution, and domain-specific AI agents to handle tens of thousands of interactions monthly. The platform enables fully agentic customer support, compliance and other productivity workflows, optimizes manual reviews, and improves productivity with intelligent task routing and seamless integration with Coinbase's tools. We'll examine its automated testing, performance metrics, and robust security measures, ensuring scalable and reliable operations.

Breakout session

Featured speakers: **Varsha Mahadevan**, Director of Engineering, AI Platform, Coinbase; **Joshua Smith**, Senior Solutions Architect, AWS

IND3313

Secure in milliseconds: Visa's AI-powered fraud defense on AWS

Public View

Attendee View

Discover how Visa revolutionized real-time payment security by leveraging AWS services, including AWS Nitro Enclaves, Amazon EKS, and Amazon MemoryDB, for their Visa Protect solution. This session explores Visa's journey to a rapidly scalable, cloud-based fraud detection solution. Learn how Visa processes massive volumes of sensitive financial data with ultra-low latency while maintaining stringent security standards. We'll dive into the multi-region architecture, real-time AI/ML fraud detection on Amazon EKS, and compute-level isolation that allowed Visa to achieve sub-250 millisecond fraud detection latency and 99.99% availability. Join us to uncover the blueprint for secure, AI-driven payment risk scoring.

Breakout session

Featured speakers: **Hema Zutshi**, Senior Director, Engineering, Visa; **Aravinda Nagalla**, Lead Solutions Architect, Visa; **Suraj Sajo**, Customer Solutions Manager, AWS

IND3315

Trading innovation: Jefferies' AI assistant on Amazon Bedrock

Public View

Attendee View

Explore Jefferies Equities' enterprise deployment of a generative AI trading assistant using Amazon Bedrock's Strands Agents framework. This Lightning talk will showcase Jefferies' technical architecture leveraging the Claude foundation model, Model Context Protocol (MCP) tools, and Amazon Bedrock Knowledge Bases for processing real-time trade and transactions data. We'll demonstrate our serverless event-driven architecture for achieving lower latency response at scale. We'll also examine our implementation of semantic caching, knowledge bases, and prompt engineering techniques that enable autonomous data analysis capabilities. Attendees will walk away with actionable architectural patterns and best practices for enterprise-grade agentic AI deployment.

Lightning talk

Featured speakers: **Sanjay Nagraj**, Senior Vice President, Electronic Trading, Equities IT, Jefferies; **Alex Mirarchi**, Principal Capital Markets Specialist, AWS

IND3318

FIS: High-performance instant payment processing at massive scale

Public View

Attendee View

New instant payment schemes like FedNow, TCH RTP, and crypto stablecoins promise unprecedented efficiency, affordability, and convenience, but they impose strict performance requirements, such as 99.99% uptime, high resiliency, and seamless integration with a wide variety of on-premises core banking platforms. Attendees of this session will learn how FIS built a cloud-native money-movement solution using services including Amazon EKS, Amazon Aurora, Amazon MSK, and Amazon CloudWatch to enable real-time interbank payments through a common unified API. We'll explore how FIS's solution achieves payments orchestration at massive scale while providing granular observability and centralized data persistence and processing.

Breakout session

Featured speakers: Ade Sturley, VP, Money Movement; FIS; Sameer Sharma, Principal Solutions Architect; AWS; Elango Sundararajan, Sr. Delivery Consultant; AWS

IND3319

Mastercard: How to protect sensitive data in real-time applications

Public View

Attendee View

Mastercard deploys real-time payment processing systems globally requiring the highest level of protection for sensitive data. Learn how they're using confidential computing as part of their modernized event-based systems to reduce data encryption latency from milliseconds to microseconds while simplifying operations and lowering costs compared to traditional hardware security modules. In this talk, Mastercard will share how they met their security, performance, and operational requirements and what they learned along the way. AWS specialists will also dive deep into how AWS Nitro Enclaves confidential compute capability supports such solutions.

Breakout session

Featured speakers: Faisal Chaudhry, Senior Principal Software Engineer, Mastercard; Eric Robins, Senior Principal Information Security Engineer, Mastercard; Andrew Shortt, Cloud Engineering Lead, AWS

IND3320

Accelerating AI: How Sun Life reduces latency and enhances engagement

Public View

Attendee View

Organizations are aiming to deliver responsive generative AI experiences that can seamlessly scale across enterprise use cases. Learn how Sun Life transformed content creation and workflow orchestration by building Content Assist—a content, scoring, and rewriting solution that can be trained on any brand guidelines, tone, or examples. Sun Life will share their journey from an AWS Lambda and Amazon Bedrock solution to an AWS AppSync powered streaming UI solution with Model Context Protocol (MCP) integration to support use cases, from corporate-wide productivity tools to automated content creation and contact center authentication. Explore implementation patterns for reducing perceived latency and orchestrating multi-agent workflows.

Breakout session

Featured speakers: Robert Chin, Program Director, Strategy and Enablement, Sun Life; Walter Kurzat, Principal Software Engineer, Sun Life; Dennis Volovic, Director, Digital Platform Architect, Contact Centres, Sun Life; Salman Moghal, Principal Delivery Consultant, AWS

IND3321

How Allianz designed AIOps at enterprise scale

Public View

Attendee View

Deploying applications that utilize large language models (LLMs) at enterprise scale presents unique challenges beyond traditional MLOps. In this session, aimed at developers and data scientists, learn how Allianz built a comprehensive AIOps framework for bringing AI-powered solutions to production. Discover how they leveraged Amazon Bedrock, Amazon SageMaker, and open-source solutions to create an ecosystem serving a wide range of user groups. Explore architectural patterns for ensuring consistency, security, and governance across AI implementations while enabling rapid deployment of new use cases. Gain insights into managing end-to-end LLM applications within complex organizational structures, balancing innovation with compliance in highly regulated environments.

Breakout session

Featured speakers: Tivadar Debreczeny, Cloud Architect, Allianz Technology; Philipp Klose, Global Solutions Architect, AWS

IND3322

From enterprise data mesh to AI with Amazon SageMaker Unified Studio

Public View

Attendee View

Learn how financial institutions are transforming fragmented data landscapes into unified AI-powered platforms using Amazon SageMaker Unified Studio. This session shares domain-driven architecture patterns, automated governance frameworks, and enterprise implementation lessons. We'll dive deep into multi-account domain strategies, data governance, data-as-a-product approaches, and cross-domain consumption patterns. From there, we'll see how to seamlessly transition from data preparation to AI/ML experimentation, unlocking new value through machine learning. Discover how Amazon SageMaker Unified Studio enables true data marketplace capabilities with ML workflows, feature stores, and model governance while maintaining banking-grade security throughout the complete analytics-to-AI lifecycle.

Breakout session

Featured speakers: Rizwan Wangde, Senior Cloud Architect, AWS; Samuel Gordon, Senior Delivery Consultant, AWS

IND3323

Fidelity Investments: Text-to-SQL for data analytics at enterprise scale

Public View

Attendee View

Learn how Fidelity Institutional (FI) developed and implemented a sophisticated Text-to-SQL generative AI solution that enables non-technical domain experts to interact with complex structured data using natural language. Dive deep into the architecture and technical implementation details of a system that handles complex database schemas, multiple table relationships, and generates complex SQL queries. We'll cover advanced topics including natural language understanding optimization, query re-write, vector search, SQL generation strategies, query safety mechanisms, and performance tuning for large-scale structured data operations. Discover the validation frameworks, monitoring systems, and API design patterns that make this solution robust and reusable.

Lightning talk

Featured speakers: Ray Zhang, Vice President, Machine Learning Engineering Practice Lead, Fidelity; Manish Worlikar, Head of FI Artificial Intelligence CoE, Fidelity; Vikram Elango, Senior AI/ML Specialist Solutions Architect, AWS

AIM114-S (Lightning talk)

Exploring dual pathways to agentic commerce with AWS and Stripe (sponsored by Stripe)

[Public View](#)[Attendee View](#)

The retail environment is changing with the emergence of gen AI-powered agents—intelligent storefronts that discover, recommend, and transact on behalf of shoppers. In this new era of agentic commerce, two pathways are taking shape: business to agent (B2A), where external answer engines connect customers with products, and agent to consumer (A2C), where retailers deploy custom on-site agents using solutions such as AWS's gen AI stack. In both journeys, trust and simplicity at checkout are key. Discover how AWS and Stripe allow for real-time transaction analytics, automated fraud detection, and tailored payment solutions—helping retailers convert product discovery into revenue while simplifying operations and boosting conversion rates. This presentation is brought to you by Stripe, an AWS Partner.

AIM120-S

Transforming banking: NatWest's journey to enhanced customer experience (sponsored by Accenture)

[Public View](#)[Attendee View](#)

NatWest Group is committed to delivering exceptional customer experiences through innovative technology solutions. In this session, NatWest leaders will share their journey of collaborating with AWS and Accenture to accelerate their data and AI transformation, leveraging AWS's cloud infrastructure to drive business growth, improve customer engagement, and simplify operations. This presentation is brought to you by Accenture, an AWS Partner.

AIM124-S

Modernizing KYC process using agentic AI (featuring Crédit Agricole CIB) (sponsored by Capgemini)

[Public View](#)[Attendee View](#)

Crédit Agricole CIB launched a renewed focus on automation through its AI Factory with strategic support from CACIB Consulting. The Know Your Customer (KYC) process was identified as the initial priority workstream. KYC solution built on agentic architecture offers a sophisticated, modular, and scalable approach to automating compliance workflows, particularly for corporate clients operating across multiple jurisdictions. This system comprises specialized agents, each handling a distinct task, and delivering key benefits: scalability across geographies, adaptability to evolving regulations, efficiency through orchestration and micro-tasking, and transparency via traceable agent roles—making it a robust solution for modern KYC compliance. This presentation is brought to you by Capgemini, an AWS Partner.

AIM209

Scaling AI with confidence: From proof of concept to production (featuring CDL) (sponsored by Dynatrace)

[Public View](#)[Attendee View](#)

From a proof of concept to scaling AI for top U.K. insurance brands, CDL's journey highlights the challenges of deploying AI at scale while staying compliant, cost-effective, and trustworthy. This session covers their use of observability to track performance and risks, building guardrails for safe AI outputs, and strategies to scale without compromising cost, quality, or governance. Learn key lessons about the people and processes behind successful AI adoption. If you're looking for practical insights to turn AI ideas into real impact, don't miss this session. This presentation is brought to you by Dynatrace, an AWS Partner.

AIM213 - S

Transforming Lincoln Financials' Gen-AI powered CX with AWS & Deloitte (sponsored by Deloitte)

[Public View](#)[Attendee View](#)

Come learn how Lincoln Financial Group (LFG), in collaboration with Deloitte and Amazon Web Services (AWS), built a transformative Generative AI (GenAI)-driven customer experience. Leveraging AWS Bedrock and Amazon SageMaker, LFG tackled challenges around unstructured data and operational inefficiency. Discover how their GenAI-powered knowledge agent transformed client-facing interactions, enabling real-time responses for financial advisors and customers while reducing wait times. Join us to explore the implementation approach, advanced technical architecture, and game-changing business outcomes that are propelling LFG to the forefront of AI-driven enterprise innovation. This presentation is brought to you by Deloitte, an AWS Partner.

AIM258 - S

Live hallucination detection in prod with LaunchDarkly's AI Configs (sponsored by LaunchDarkly)

[Public View](#)[Attendee View](#)

When bringing generative AI applications to production, accuracy is key. LaunchDarkly's AI Configs give you the flexibility to change your generative AI applications at runtime, so you can measure model performance more effectively in a real-world setting. In this session, we'll walk through a simplified RAG implementation of an insurance chatbot using an Amazon Bedrock knowledge base. You'll see a demo of how this chatbot uses LaunchDarkly AI Evals to detect hallucinations in production. We'll also cover how to collect metrics such as latency and cost, and discuss strategies for building guardrail logic directly into your runtime configuration. This presentation is brought to you by LaunchDarkly, an AWS Partner.

AIM263-S (Lightning talk)

AI Agents with Amazon Nova Sonic: Vonage for Financial Services (sponsored by Vonage, Part of Ericsson)

[Public View](#)[Attendee View](#)

Financial Services has been at the forefront of speech and self service technologies for many decades. Yet it remains challenging to keep up with increasing business demands for digital automation while expanding customer value and relevance. Amazon Nova Sonic provides a new level of AI efficiency with its sophisticated speech-to-speech and flexible knowledge base architecture, built on powerful AI foundational models. This talk explores new use cases in banking, mortgage, and wealth management with Vonage's integration of Nova Sonic AI Agents into contact center self-service, mobile apps, web experiences, video sessions, and API-powered CX of all kinds. This presentation is brought to you by Vonage, Part of Ericsson, an AWS Partner.

AIM273-S

Building a cloud-native risk decisioning platform for resilience (featuring Capital One) (sponsored by PwC)

[Public View](#)[Attendee View](#)

Capital One's FUSE platform represents a leap in risk management—built natively on AWS to deliver real-time decisioning, regulatory compliance, & enterprise resilience. While many financial institutions are just beginning to move from on-prem to cloud, FUSE is already ahead, helping Capital One exceed regulatory expectations & enabling its merger with Discover. In this session, leaders Solomon Francis & Matt Davis share how they built FUSE from the ground up on AWS using Bedrock, SageMaker, & S3. FUSE demonstrates how a cloud-native platform can future-proof financial institutions against rising risk & compliance demands. This session offers practical lessons in designing & building risk platform in AWS. This presentation is brought to you by PwC, an AWS Partner.

AIM276-S

GenAI in private equity: Moving from pilots to performance (sponsored by PwC)

[Public View](#)[Attendee View](#)

Private equity firms are entering a new era where generative AI is no longer experimental—it's essential to value creation. In this session, explore how leading firms are scaling GenAI strategies in partnership with PwC and AWS. Learn how AI is transforming investment decisions, from smarter sourcing and due diligence to portfolio company optimization. We'll share real-world use cases in forecasting, contract analysis, and customer engagement, plus examples of measurable business outcomes. The session also covers key considerations for responsible AI adoption, including governance, risk, and compliance frameworks tailored to the private equity landscape. This presentation is brought to you by PwC, an AWS Partner.

AIM279-S

FINRA: Accelerate massive data processing with NVIDIA on AWS EMR (sponsored by NVIDIA)

[Public View](#)[Attendee View](#)

Over the past five years, FINRA built and optimized a large Financial Services database. FINRA runs at massive size and scale, consuming more than 600 petabytes of storage as it pieces together trillion events each day from market exchanges and broker-dealers. Learn how FINRA took their architecture to the next level with NVIDIA accelerated compute for a cost-efficient solution. Explore the architectural patterns and AWS services used, including Amazon EMR, AWS EKS, and learn how FINRA improved performance and reduced costs with NVIDIA GPUs. This presentation is brought to you by NVIDIA, an AWS Partner.

AIM280-S

Building enterprise-ready agentic speech AI pipelines on AWS (sponsored by NVIDIA)

[Public View](#)[Attendee View](#)

Enterprises in Financial Services, healthcare, and customer service are rapidly adopting agentic AI and voice agents to transform how they serve customers, from secure transcription and summarization to intelligent voice agents. In this panel, NVIDIA and partners share lessons learned from deploying GPU-accelerated speech AI pipelines in production. This presentation is brought to you by NVIDIA, an AWS Partner.

AIM282 - S

Building scalable agentic AI solutions with AWS (sponsored by Capital One)

[Public View](#)[Attendee View](#)

As businesses move from AI experiments to scalable customer facing AI solutions, Capital One's Multi-Agentive Conversational AI Workflow highlights what it takes to build next-generation agentic AI frameworks. In this session, you'll learn how AWS services like Sagemaker, combined with a modern data ecosystem and state-of-the-art AI stack, helped Capital One create a leading-edge multi-agentive AI workflow that meets the needs of various users and customers in complex business environments. The team will share real world benefits and challenges of training and hosting customized LLMs, and advantages of AWS services, including quicker time to market and sophisticated inference optimizations. This presentation is brought to you by Capital One, an AWS Partner.

AIM3307 - S

Building the future trading platform leveraging AI and AWS (featuring LPL Financial) (sponsored by Cognizant)

[Public View](#)[Attendee View](#)

LPL Financial is one of the fastest growing Broker Dealers, with an aim to grow their client base exponentially leading them to build a future ready Trading Platform. To build a futuristic Trading platform, know how can they integrate advanced technologies like artificial intelligence (AI), leverage microservices and cloud infrastructure, and plan for disruptive innovations. A modular, globally-focused Trading Platform that simplifies complex workflows will be critical to staying competitive in this Era of AI. The platform building adopts futuristics vision ensuring Scalability, Stability and resilience. This presentation is brought to you by Cognizant, an AWS Partner.

AIM3317 - S

The next frontier in financial systems: transformer-based foundation models (sponsored by NVIDIA)

[Public View](#)[Attendee View](#)

Transformer-based foundation models are revolutionizing payment systems by providing deep contextual understanding of sequential transaction data. In this session, NVIDIA, AWS, and Stripe experts explain how large-scale tabular foundation models are trained and deployed to detect fraud in real time, personalize customer experiences, and interpret complex transaction patterns. Attendees will learn about the cloud-based AI factories enabling scalable deployment, NVIDIA's accelerated computing for efficient training and tuning, AWS's secure and scalable cloud infrastructure, and Stripe's real-world applications that use these innovations to deliver adaptive, secure Financial Services at global scale. This presentation is brought to you by NVIDIA, an AWS Partner.

ANT102-S (Lightning talk)

Modernizing wealth management with cloud + AI use cases (sponsored by Incedo Inc)

Public View

Attendee View

Wealth management firms are striving to deliver faster, more personalized client outcomes while overcoming legacy constraints and regulatory complexity. In this session, a leading Wealth Management firm, together with Incedo, will share real-world examples of how cloud and AI are driving advisor productivity and accelerating speed-to-market. From modern data platforms to AI-powered insights and intelligent automation, learn how innovative use cases are helping firms reduce operational friction, enhance client engagement, and launch new products faster — paving the way for future-ready wealth management. This presentation is brought to you by Incedo Inc, an AWS Partner.

ANT203

Enabling AI innovation with Amazon SageMaker Unified Studio

Public View

Attendee View

Many enterprises want to build a culture of AI innovation and manage it at scale. Learn how a leading financial institution implemented a unified data and AI platform with built-in governance to solve this challenge. Using the next generation of Amazon SageMaker, their petabyte-scale solution enables users to discover and access data in a cloud-native marketplace then build in a unified data and AI development environment. This session is ideal for data and platform leaders looking to balance self-service capabilities with robust governance to enable AI initiatives.

ANT 402

Build an end-to-end fraud detection system with Amazon SageMaker Unified Studio

[Public View](#)[Attendee View](#)

Experience the seamless integration of Amazon EMR, Amazon Athena and AWS Glue with Amazon SageMaker Unified Studio to create a sophisticated fraud detection system. Learn how to leverage serverless compute for complex financial workloads while ensuring operational efficiency and security. Specifically designed for financial service organizations, join this session to build an end-to-end fraud analytics data pipeline with Amazon SageMaker Unified Studio.

ARC 404

Building resilient multi-Region applications with Capital One

[Public View](#)[Attendee View](#)

Organizations face significant challenges achieving predictable recovery times and maintaining consistency in multi-Region applications at scale. Learn how Capital One uses Application Recovery Controller (ARC), Aurora DSQL, and DynamoDB Multi-Region Strong Consistency to create resilient architectures with bounded recovery targets. Through real-world implementation patterns, discover how ARC Region switch controls and AWS Fault Injection Service transform maintenance and testing approaches. This expert-level session provides practical strategies for architecting multi-Region applications that deliver predictable recovery and consistent operations.

BIZ 216

Redefining service excellence: Canada Life's AI-powered contact center

[Public View](#)[Attendee View](#)

Join this session to discover how Canada Life transformed its contact center by moving from a fragmented, manual system to a cloud-based, AI-powered solution using Amazon Connect. This shift enabled seamless multi-channel engagement enabling customer interaction through their preferred channel, simplified authentication, and empowered agents with real-time tools and unified interfaces—resulting in streamlined operations, reduced complexity, faster resolutions and thus reduced operational costs and significantly improved customer satisfaction.

B I Z 2 2 0

Transforming contact centers in Financial Services with Amazon Connect (featuring Zepz)

[Public View](#)[Attendee View](#)

In Financial Services, balancing personalization with compliance and security presents unique challenges to delivering superior customer experiences. Zepz, the global payments group behind leading remittance brands WorldRemit and Sendwave, began their Amazon Connect journey in 2021. Operating in over 130 countries with 5,000+ money transfer corridors and facilitating more than \$16 billion in transfers, Zepz has transformed their customer service operations. In this session, learn how they manage 20 million customer profiles while achieving impressive results: 30% contact deflection using generative AI, comprehensive analytics across all voice and chat interactions, case and ticket management, data-driven quality assurance, and modernized customer feedback systems.

B I Z 2 2 3

Research agents in action: From complex business challenge to trusted insights (featuring Principal Financial)

[Public View](#)[Attendee View](#)

What if your most challenging research tasks could be completed in minutes instead of weeks? That's the power of Amazon Quick Research. Join us, along with Principal Financial Group, to see how Quick Research breaks down complex topics, pulling from your organization's internal knowledge, web data, and premium third-party datasets to deliver comprehensive, source-verified insights. Explore diverse use cases—from market intelligence to risk assessments—and learn about the journey Principal took towards smarter research and decision-making.

C M P 3 2 7

JPMC and Amazon Advanced Solutions Lab drive quantum R&D on Braket

[Public View](#)[Attendee View](#)

The study introduces qReduMIS, a quantum-informed reduction algorithm for solving maximum independent set problems. This hybrid quantum-classical framework combines traditional kernelization techniques with quantum computing insights. The quantum computer serves as a co-processor, identifying vertices likely to be in large independent sets, which helps optimize the reduction process. Testing on Rydberg quantum hardware through Amazon Braket, using up to 231 qubits, demonstrated that qReduMIS can address performance limitations in both classical and quantum solvers. The framework can be implemented on various quantum platforms, including superconducting qubits and trapped ions, with potential for future enhancements.

CMP409

It's about time! Improving distributed systems with Amazon Time Sync (featuring Nasdaq)

[Public View](#)[Attendee View](#)

Keeping track of the order of events in distributed systems is one of the most fundamental and important problems in computer science. In 2023, we improved the Amazon Time Sync Service to microsecond-level clock accuracy so we, and our customers, can use wall-clock time in applications including databases, AI/ML, financial services, broadcast/media, telecommunications, and more to improve both the performance and resiliency of our systems and applications. We will be sharing how with real-world examples of AWS services now leveraging this capability, as well as direct customer references who are using precision time to build their next generation applications.

CNS342

Navigate cloud compute with Fargate and ECS Managed Instances (featuring QRT)

[Public View](#)[Attendee View](#)

Amazon ECS offers multiple compute options that enable architects to optimize for performance, cost, and operational requirements. This session provides a comprehensive guide to using AWS Fargate, Amazon ECS Managed Instances, and self-managed EC2 with Amazon ECS. We'll dive into the technical architecture, operational models, and cost implications of each compute type through real world scenarios. You'll learn the inflection points when matching compute options to specific application patterns including batch processing, web services, and data intensive workloads.

COP213-S

Solving the cloud privilege problem at scale: A Fiserv case study (sponsored by Sonrai Security)

[Public View](#)[Attendee View](#)

This session explores how Fiserv, a global leader in Financial Services technology, transformed its cloud identity security and governance strategy by deploying Sonrai's Cloud Permissions Firewall. Facing challenges across 900+ AWS accounts, including overprivileged identities, limited visibility into third-party access and fragmented tools, Fiserv required a scalable, proactive approach. Attendees will learn how automation, centralized dashboards, and advanced identity controls enabled Fiserv to remediate thousands of identity risks, achieve compliance readiness, and reduce operational risk. The case study demonstrates practical strategies for securing enterprise-scale cloud environments. This presentation is brought to you by Sonrai Security, an AWS Partner.

Building reliable operations, featuring Fannie Mae

Public View

Attendee View

Managing incidents effectively across complex infrastructure remains a challenge for many organizations. In this session, learn proven practices for building reliable operations and reducing Mean Time to Resolution (MTTR) through effective incident management. We'll showcase how Fannie Mae transformed their operations by building a cross-region observability platform on AWS, enabling them to automate incident response and improve reliability across their hybrid environment. Walk away with practical strategies for implementing automated incident management, establishing effective on-call processes, and leveraging AWS services to enhance operational reliability within your organization.

C O P 3 5 8

Multi-Region disaster recovery & resilience testing (featuring Fidelity)

Public View

Attendee View

Explore how AWS innovations are revolutionizing disaster recovery (DR) strategies for enterprise-scale organizations. Managing thousands of applications across AWS Regions demands sophisticated DR capabilities that have historically required complex and resource-intensive custom development. Learn how Fidelity transformed DR for 8,500 mission-critical applications by using the multi-Region recovery orchestration, live dashboards, and reporting capabilities of Amazon Application Recovery Controller's Region switch feature. Combined with AWS Fault Injection Service, Fidelity also validates their recovery procedures under realistic conditions to bolster confidence in their DR plan. Discover how AWS enables enterprises to modernize their infrastructure operations, improve compliance, and enhance business continuity for mission-critical applications.

D A T 3 1 8

Web3 + AI: Agents that mean business (featuring Coinbase)

Public View

Attendee View

AWS is accelerating Web3 development across diverse use cases, including AI agents entering the digital economy, through core infrastructure, specialized offerings, and partner solutions. Join AWS and Coinbase to dive deep into the fundamental building blocks and full-stack architecture where AI agents, powered by Amazon Bedrock, execute digital assets payments using open payment protocols over a public blockchain. To ensure transaction security, these agents are equipped with wallets built on AWS Nitro Enclaves. Join this session to learn how to leverage AWS and Coinbase technologies to shape the future of autonomous online payments.

DEV326

Anti-Money Laundering multi-agent orchestration with AWS Strands

[Public View](#)[Attendee View](#)

Learn how to build a production-ready, serverless Anti-Money Laundering (AML) system using AWS Strands SDK and Anthropic's Claude model in Amazon Bedrock. The architecture features eight specialized agents (Perception, Context, News, Reasoning, Risk, Action, Audit, Learning) orchestrated for intelligent financial crime detection. Through live demonstrations, see semantic reasoning beyond rule-based detection, real-time API integration, and cost-effective serverless deployment using Amazon Bedrock AgentCore Deployment. Experience high-risk transaction processing, Strands SDK integration with Claude's semantic analysis, and complete multi-agent coordination. Gain realtime understanding on building LLM-powered compliance systems with explainable AI decisions and regulatory compliance.

DVT104-S

How Enterprises are pioneering innovation and DevOps (sponsored by Harness, Inc)

[Public View](#)[Attendee View](#)

To keep up to date with today's rapidly evolving financial landscape, Harness customers decided to move to a cloud-first strategy. Led by Nick Durkin, Field CTO at Harness, this session will explore how companies leverage Harness's comprehensive software delivery platform to revolutionize its development processes, and AWS to achieve their goal of becoming a cloud-first leading financial company. This presentation is brought to you by Harness, Inc, an AWS Partner.

DVT206-S (Lightning talk)

Transforming observability: Ripple's journey with Grafana on AWS (sponsored by Grafana Labs)

[Public View](#)[Attendee View](#)

Discover how Ripple revolutionized their observability strategy by implementing Grafana on AWS. In this session, learn how Ripple consolidated multiple monitoring tools into a unified Grafana solution. Explore how this transformation delivered 77% cost savings while maintaining high performance for demanding workloads. See how Grafana's seamless integration with AWS native services—including Amazon S3, Amazon CloudWatch Logs, and AWS CloudTrail—created a scalable, efficient observability platform. Gain insights into managing open source Prometheus and architecting an observability solution that scales with your business needs. This presentation is brought to you by Grafana Labs, an AWS Partner.

GBL301 (Lightning talk)

Toss Securities' AI Transformation with automated Super App Ops

[Public View](#)[Attendee View](#)

Toss, Korea's leading fintech innovator, serves 25 million users through their super app, offering seamless money transfers, banking, and securities services. Toss Securities bridges time zones and languages with Earnings Call Reports, sharing investment wisdom in stories that cross generations and transcend languages. As the app's services expand, managing the increasingly complex super app becomes challenging. This session will show how Toss integrates Nova models with MCP for device testing, moving beyond checklist-based methods to natural language and user experience-driven app test automation, and share their future roadmap.

GBL302 (Lightning talk)

Beyond fine-tuning: Agentic AI for HFT quantitative analytics

[Public View](#)[Attendee View](#)

Capital markets face a critical challenge: traditional LLMs generate skewed sentiment when analyzing combined dynamic market data and historical pricing for quantitative strategies. This session demonstrates a production agentic architecture that enables users to launch immediately without the time-consuming process of fine-tuning models. By eliminating the tedious work of creating labeled datasets, teams can quickly implement reliable investment analytics and start seeing positive results right away. Our solution leverages Claude 3.7 for task planning, MCP for historical data collection, and DeepSeek R1 reasoning in SageMaker. Using Bedrock multi-model capabilities and Q CLI, this Level 300 session includes demos and architectural patterns.

HMC201

Architecting resilient multicloud operations, featuring Monzo Bank

[Public View](#)[Attendee View](#)

When organizations choose a multicloud strategy to address their resilience needs, they often face challenges in areas such as data consistency, service isolation, and long term testing and maintenance. Join this session to learn about Monzo Bank's resilience journey in implementing a strategic multicloud architecture that offers a practical and efficient approach to operational resilience. We'll dive deep into Monzo's Stand-in Platform, which runs critical banking services on a different cloud provider alongside their primary AWS infrastructure. You'll learn practical patterns for maintaining service availability, managing data consistency trade-offs, and implementing resilient multicloud architectures.

HMC324 (Lightning talk)

BCC: Hybrid architecture for generative AI to meet regulatory needs

[Public View](#)[Attendee View](#)

Bank CenterCredit (BCC), a leading bank in Kazakhstan developed the first secure, scalable hybrid architecture tailored to meet Kazakhstan's financial data regulations in Central Asia. Leveraging AWS Outposts and AWS KMS, the bank enabled local data storage with encrypted processing in the cloud. This architecture created solid foundation for multiple Generative AI delivered with Amazon SageMaker and Amazon Bedrock. Use cases include custom speech recognition model in Russian, Kazakh, and mixed languages, investments news summarization, and an HR chatbot. These AI solutions enabled regulatory compliance, cost savings, and operational efficiency—positioning BCC for continued innovation and growth.

IND101-S (Lightning talk)

Reliable AI at scale: How data + AI observability powers AI products with AWS (sponsored by Monte Carlo)

[Public View](#)[Attendee View](#)

AI success depends on trust. Yet too often, broken data, drifting models, and unpredictable failures undermine adoption and stall ROI. In this session, Peter Milligan, Head of Product Management at Monte Carlo, will share how companies like Fox, Nasdaq, American Airlines and others are partnering with AWS and Monte Carlo to deliver reliable, production-ready AI at scale. Discover how unified observability across data pipelines, models, and AI agents enables teams to detect and resolve issues faster, safeguard customer trust, and unlock real business impact. This presentation is brought to you by Monte Carlo, an AWS Partner.

IND215-S (Lightning talk)

Scaling Data Transformation w/ dbt & Nasdaq: Unlocking enterprise power global markets (sponsored by dbt Labs)

[Public View](#)[Attendee View](#)

As organizations expand into new markets, scaling data transformation capabilities while maintaining consistency and best practices becomes critical. In this session, Nasdaq shares how it is partnering with dbt to deliver enterprise-grade transformation tooling to their customers through an OEM approach. By embedding dbt Enterprise alongside Nasdaq's library of best practices, macros, and reusable pipeline templates, customers can accelerate their data initiatives and build their own transformation workflows with confidence. Drawing from data mesh concepts, this joint presentation will showcase how clients can leverage standardized contracts and pipelines while tailoring solutions to their unique needs. This presentation is brought to you by dbt Labs, an AWS Partner.

IND217-S (Lightning talk)

Fast and compliant CI/CD pipelines in the financial industry (sponsored by Octopus Deploy)

[Public View](#)[Attendee View](#)

With digital transformations, cloud migrations, and evolving regulations, financial institutions must deliver faster, manage increasing complexity, and stay compliant. Octopus Deploy helps organizations streamline delivery, secure deployments, and embrace innovation without compromising compliance. In this Lightning talk, you'll see how Octopus enables powerful pipelines that accelerate development and automate repeatable workflows across hybrid and multi-cloud environments. Built-in governance provides auditability, security, and role-based access controls tailored for regulated industries. Learn how Financial Services teams use Octopus Deploy to move quickly while keeping compliance front and center. This presentation is brought to you by Octopus Deploy, an AWS Partner.

IND372-S (Lightning talk)

Reinventing credit origination process through AI (sponsored by Cloudera)

[Public View](#)[Attendee View](#)

Credit is still a very laborious process in financial institutions. Join this session to hear from Cloudera industry expert Adrien Chenallier how firms can integrate reasoning models with agentic patterns to reach a credit decision efficiently. We will focus on ensuring compliance and implementing strategies to ensure potential errors are flagged for escalation, which is critical for financial institutions and other highly regulated industries managing sensitive data. This presentation is brought to you by Cloudera, an AWS Partner.

MAM205

Derisk your mainframe exit with agentic AI-powered refactoring ft BMW & Fiserv (MAM205)

[Public View](#)[Attendee View](#)

Discover how industry leaders Fiserv and BMW modernized mission-critical mainframe applications using AWS Transform's agentic AI capabilities. Learn how Fiserv implemented a mainframe modernization factory that reduced modernization time while improving code quality and maintainability of refactored applications. Through BMW's transformation journey, explore how critical systems were migrated to a new technology stack within months, achieving unprecedented speed and efficiency. This session explores AWS Transform's AI-powered capabilities—from code analysis to intelligent refactoring—and their game-changing results. Get practical insights for large-scale refactoring from organizations that have successfully modernized millions of lines of mission-critical code across diverse industries.

MAM206

LSEG's migration & modernization journey: blueprint for cloud success

Public View

Attendee View

London Stock Exchange Group (LSEG) navigated significant hurdles in their digital transformation journey, including legacy processes, tight timelines, scalability issues, organizational silos, and operational friction. In this session, LSEG will reveal how they conquered these challenges to accelerate cloud value realization and maintain their competitive edge. Learn about their strategic architecture decisions, migration framework, and modernization approach that drove success. Discover how they developed end-to-end solutions to scale repeatable patterns, fostering a new cloud-fluent culture. Join us for firsthand insights into LSEG's transformation journey that you can apply to your own organization.

MAM207

Reimagine mainframe workloads at speed with agentic AI - ft Itaú & ADP

Public View

Attendee View

Join leaders from ADP and Itaú as they share how they reimaged their mainframe-based mission-critical systems. Dive deep into their transformation journey, exploring crucial architectural decisions, risk mitigation strategies, and lessons learned. Discover how they leveraged AWS Transform's automated code analysis, documentation, and business rules extraction, paired with other AWS developer tools, to achieve efficiency gains in reverse engineering, forward engineering, and testing. Whether you're at that starting line or already moving through your modernization journey, this session offers valuable insights from organizations that have successfully accelerated from legacy systems with AWS Transform.

MAM218-S (Lightning talk)

PwC & BMO: AI in risk & finance - elevating MD&A to treasury insights (sponsored by PwC)

Public View

Attendee View

Join PwC and BMO for a live dive into BMO's Risk and Finance AI journey, where a core team harnesses cutting-edge technology to illuminate risk and reporting. Early builds leveraged AWS Bedrock to automate MD&A summarization and content generation, turning dense management discussion into clear, decision-ready insights. As the program evolved, new use cases emerged: precise meeting note capture and summarization, and generative AI that describes and proposes changes to treasury risk modelling. Attendees will see how ongoing model evolution can be understood, tracked, and governed, enabling faster decisions, stronger risk transparency, and practical lessons for financial institutions navigating AI adoption today. This presentation is brought to you by PwC, an AWS Partner.

MAM221-S (Lightning talk)

Architecting trusted genAI and agentic experiences in Financial Services (sponsored by Coveo)

[Public View](#)[Attendee View](#)

Generative AI is reshaping Financial Services, but success depends on building solutions securely and at scale. In this session, learn how leading banks and insurers use AWS Bedrock and Coveo to deliver enterprise-ready GenAI that is accurate, compliant, and permission-aware. Discover how organizations cut support volumes, boost employee productivity, and unlock millions in savings by integrating GenAI across complex ecosystems with millions of documents. We'll share best practices for embedding GenAI into customer and employee experiences, governance, and how to move beyond pilots to production with speed, trust, and measurable impact. This presentation is brought to you by Coveo, an AWS Partner.

PEX301

Agentic AI solutions for Financial Services & insurance with AWS

[Public View](#)[Attendee View](#)

Join us for an exciting deep dive into cutting-edge AI solutions for Financial Services and insurance Partners using AWS technologies! Discover how to harness Amazon Bedrock AgentCore and Strands SDK to enhance customer experiences. Learn to build intelligent underwriting assistant for insurance and explore diverse use cases in Financial Services. Recommended for teams looking to strengthen their AI capabilities in Financial Services.

SEC203

State of the art: AWS data protection in 2025 (featuring Vanguard)

[Public View](#)[Attendee View](#)

Join AWS Cryptography leaders for a comprehensive tour of 2025's groundbreaking security innovations. Discover the latest launches across Cloudfront, KMS, Private CA, and Secrets Manager, showcasing AWS's implementation of NIST-standardized post quantum cryptography. Learn how we're revolutionizing cloud security through quantum-resistant algorithms, advanced certificate management, and automated secrets handling. Get an inside look at Vanguard's enterprise-wide PQC migration and how they made it a strategic business priority. See firsthand how AWS continues raising the bar on data protection for your most sensitive workloads.

SEC215 (Lightning talk)

Last HSM standing: Zettle by PayPal's move to AWS Payment Cryptography

[Public View](#)[Attendee View](#)

Join Zettle by Paypal as they reveal how one of Europe's most innovative point-of-sale vendors is using AWS Payment Cryptography to retire their last on-premise hardware. Learn how they successfully migrated real-time transaction volumes in multiple geographies while maintaining PCI PIN & PCI P2PE compliance, increasing resiliency, and reducing infrastructure costs.

SEC216-S

Seamless network-based fraud protection for fintech & digital business (spons. by Vonage, Part of Ericsson)

[Public View](#)[Attendee View](#)

Online fraud is no longer isolated — it's industrialized, scalable, and relentless. From synthetic identities and account takeovers to payment scams and traffic pumping, today's attacks are powered by crime-as-a-service tools that evolve faster than traditional defenses. FinTechs and Digital Businesses are under pressure to meet strict compliance requirements while delivering seamless, user-friendly experiences — yet every additional security check risks customer churn. The cost of failure is staggering: direct losses, missed revenue, and significant erosion of brand trust. This talk explores how mobile network intelligence adds an invisible, real-time layer of fraud protection, building brand trust while improving customer experiences. This presentation is brought to you by Vonage, Part of Ericsson, an AWS Partner.

SEC224

Infrastructure protection at scale with AWS Security, featuring Block, Inc.

[Public View](#)[Attendee View](#)

Learn best practices from AWS and Block's Network Security team on how to architect a robust network security strategy using AWS Network Firewall, AWS WAF and other security services to protect large-scale infrastructure. This session explores real implementation patterns to protect egress and ingress, covers architectural decisions, and lessons learned while building advanced security controls.

SEC 225 - S

Securing data for your AI workloads with tokenization (sponsored by Capital One)

[Public View](#)[Attendee View](#)

Enterprises often withhold sensitive data from AI models due to risk, which can result in limited business insights. This session explores how tokenization can address this challenge by securing training and response data, which renders the data useless to unauthorized access and potential exposure while preserving its analytical value. Attendees will gain insights from Capital One's large-scale tokenization implementation, along with actionable strategies, architectural patterns, and implementation blueprints for applying tokenization within complex AWS environments. You'll leave with actionable guidance for securing diverse AI-driven use cases at scale. This presentation is brought to you by Capital One, an AWS Partner.

SMB 205

Learn how Riskspan is transforming private credit market using GenAI

[Public View](#)[Attendee View](#)

RiskSpan is transforming private credit markets through innovative platform powered by AWS Generative AI and Bedrock. Riskspan's GenAI powered tool automatically models financial transactions directly from documents, extracting and processing critical data to generate precise valuation and risk metrics. This comprehensive approach not only standardizes procedures but also significantly enhances risk management capabilities across portfolios. Join us to explore how Riskspan's solution, powered by AWS GenAI and Bedrock, is driving the critical needs for transparency and accessibility in a \$14 trillion market with \$9 trillion growth potential from underrepresented regions.

SMB 305

Maximize ROI: How Octus migrated CreditAI from Azure to Amazon Bedrock

[Public View](#)[Attendee View](#)

This session reveals how Octus migrated CreditAI to Amazon Bedrock. We will detail Octus' journey from managing multiple cloud providers and costly GPU instances to implementing a streamlined architecture using Amazon Bedrock, AWS Fargate, and Amazon OpenSearch. Learn how Octus achieved zero downtime while reducing costs, improving scalability to handle millions of documents, and enhancing response quality. Discover practical strategies for consolidating AI operations and leveraging AWS to deliver powerful, conversational intelligence at enterprise scale.

SPS310

Commonwealth Bank of Australia reimagines modernization via agentic AI

[Public View](#)[Attendee View](#)

Commonwealth Bank of Australia (CBA) revolutionizes legacy modernization using AWS Bedrock's agentic AI architecture. Their groundbreaking solution slashes application assessment time from 6 weeks to under 1 hour and reduces overall modernization cycles from 16 weeks to just 1 week. Through specialized AI agents, CBA automatically analyzes legacy code, detects vulnerabilities, and orchestrates complex transformations while maintaining strict banking compliance. Multi-agent workflows handle security assessments, cloud readiness analysis, and automated network flow implementations, enabling transformation of monolithic systems into cloud-native applications with unprecedented speed and precision.

SPS312

Modernizing global payment processing: Moving from mainframe to AWS

[Public View](#)[Attendee View](#)

Learn how Global Payments is transforming its 40-year-old mainframe system into a modern AWS cloud platform. This major Financial Services company, which processes credit cards for over 600 million cardholders worldwide, is using enhanced support and monitoring tools to ensure a reliable transition to cloud-based processing.

SPS318

Fidelity's AI-powered support analysis system

[Public View](#)[Attendee View](#)

Explore how Fidelity uses Amazon Bedrock and AI to gain insights from AWS support data. We'll show how they combined DynamoDB, EventBridge, Lambda, and OpenSearch with generative AI to analyze support cases and system health data. Learn the technical details and benefits of using AI to improve cloud operations reliability.

SPS 3 2 1

How Yahoo! Finance built research multi-agent systems with Gen AI

[Public View](#)[Attendee View](#)

Learn how Yahoo! Finance architected multi-agent systems to transform financial research and analysis using generative AI. Discover their implementation of Model Context Protocol (MCP) for efficient agent collaboration, integration of structured/unstructured data processing, and video analysis through tool/API calling. Get practical guidance from their production deployment and insights for scaling agent architectures. For data scientists and architects building enterprise AI solutions.

WPS 2 0 1

Architecting large-scale migrations at the NSA, Fannie Mae, and DCSA

[Public View](#)[Attendee View](#)

Join this deep dive exploring the architecture and implementation strategies behind three massive public sector cloud migrations. This session covers how to architect and execute complex migrations to AWS, focusing on the technical challenges, solutions, and infrastructure decisions to drive success, lower costs, and set the foundation for emerging technologies like GenAI. Speakers will share insights from NSA's secure migration approach and how they maintained operations throughout the process. Additionally, we'll examine the technical design behind Fannie Mae's cloud-native financial forecasting platform, which processes 30 billion loan activities. Finally, DCSA will discuss how they used AWS Countdown for real-time migration with zero downtime.

WPS 3 1 7

Secure AI agents delivering efficiency in regulated industries (featuring Sicoob)

[Public View](#)[Attendee View](#)

Regulated industries demand more than AI deployment—they require secure, efficient, and measurable outcomes. Holland Casino modernized cloud operations with a multi-agent system using AWS Strands Agents SDK, orchestrating agents for security, cost optimization, and operations support with fine-grained permissions. Sicoob, Brazil's largest credit union, transformed operations with AI agents and digital employees: achieving 80%+ case resolution, cutting document processing time by 25%, deploying 80 digital employees to save 440,000 hours and R\$23M, and automating 85% of credit operations. In this session, you'll learn how organizations securely scale AI to cut costs, streamline compliance, and modernize operations.

Financial Services interactive sessions

Chalk talks

A highly interactive content format, chalk talks begin with a short lecture delivered by an AWS expert followed by an open-format Q&A session using a whiteboard to encourage discussion from attendees. Chalk talks foster technical discussions about real-world architecture challenges.

IND301

Architect petabyte-scale observability with OpenSearch and Amazon Q

Public View

Attendee View

Organizations face increasing challenges to manage logging at massive scale while meeting strict compliance and cost requirements. Drawing from deployments in Financial Services, this chalk talk will demonstrate proven architectural patterns and optimization techniques that differentiate successful implementations from costly failures. Learn how to build a unified observability pipeline using OpenTelemetry agents, Amazon OpenSearch Ingestion, and OpenSearch UI that seamlessly integrates with existing enterprise systems. Discover how Amazon Q enables rapid pattern identification, compliance monitoring, and automated insight extraction, empowering developers to build advanced logging solutions that meet enterprise requirements.

Chalk talk

Featured speakers: Muthu Pitchaimani, Senior WW Search Specialist SA, OpenSearch, AWS; Mark Kavanagh, Principal Solutions Architect, AWS

IND315

Do's and don'ts for mission-critical workloads in Financial Services

Public View

Attendee View

Attendees will gain practical insights into avoiding common architectural pitfalls that can lead to service disruptions and performance degradations in mission-critical AWS environments. Learn battle-tested strategies for implementing effective observability, automated recovery mechanisms, and controlled deployment practices that maintain system reliability while ensuring continuous improvement. Discover how to properly implement multi-region resilience patterns, manage complex dependencies, and establish operational runbooks that are optimized for high-stress incidents. Walk away with a clear framework for evaluating architectural decisions through the lens of reliability engineering principles, enabling you to balance innovation velocity with the stability requirements of your most critical workloads.

Chalk talk

Featured speakers: Vasu Chari, Principal Solutions Architect, AWS; Samuel Baruffi, Principal Solutions Architect, AWS; Shivani Sharma, Senior Solutions Architect, AWS

IND317

Financial Services multi-Region design patterns and best practices

Public View

Attendee View

Explore proven architectural patterns and design principles for building resilient multi-Region deployments for Financial Services on AWS. Gain practical insights into leveraging specialized AWS services like Amazon Application Recovery Controller, Amazon Aurora DSQL, and Amazon DynamoDB Multi-Region strong consistency to build robust global solutions. Walk away with a comprehensive understanding of the tradeoffs involved in multi-Region deployments and the ability to make informed architectural decisions that balance reliability, performance, and cost for your organization's specific requirements.

Chalk talk

Featured speakers: Tarik Makota, Senior Principal Solutions Architect, AWS; Rob Charlton, Principal Technologist, AWS

IND 3 2 4

Simplify fraud investigation with Strands Agents and Amazon Nova Sonic

Public View

Attendee View

Fraud detection is evolving with AI agents and voice interfaces to make investigation more intuitive and effective. This session demonstrates how financial institutions can leverage AI agents to autonomously analyze complex fraud patterns while streamlining user interactions through voice interfaces. Explore how Strands Agents simplifies building voice-based detection solutions to identify fraudulent activities and fraud rings through pattern recognition and relationship mapping using Amazon Neptune and Amazon Nova Sonic. Attendees will learn how AI agents can break down complex workflows, access fraud detection tools, and adapt their actions based on context and memory.

Chalk talk

Featured speakers: Ruben Afonso, Solutions Architect, AWS; Patrik Nagel, Principal Solutions Architect, AWS

IND 3 3 3

Accelerate financial products from idea to market with AI agents

Public View

Attendee View

Financial institutions face increasing complexity to quickly digitize and personalize products across global markets while maintaining regulatory compliance. In this session, we'll explore how AWS's agentic AI services and Amazon Nova foundation models automate the digitization of financial offerings—from investment products to insurance policies. Learn how to leverage Amazon Bedrock and Amazon Nova to generate localized marketing assets, accelerate consumer onboarding, and simplify regulatory documentation. Attendees will leave with proven strategies to bring personalized financial products to market faster at global scale.

Chalk talk

Featured speakers: Ninad Joshi, Senior Solutions Architect, AWS; Neelam Koshiya, Principal Applied AI Architect

IND 3 4 1

Behind the curtain: Generative AI observability in Financial Services

Public View

Attendee View

Financial institutions deploying generative AI seek to effectively track model behavior, detect reasoning failures, and maintain regulatory compliance. In this chalk talk, we'll explore real-time observability techniques for generative AI workloads in regulated industries. You'll learn how to monitor prompt drift, hallucinations, grounding failures, and output volatility using Amazon Bedrock with Amazon CloudWatch and custom AWS Lambda logs. We'll walk through a solution that traces model behavior, visualizes anomalies, and enables prompt-level debugging—helping you meet audit, trust, and performance requirements for Financial Services deployments.

Chalk talk

Featured speakers: Jiwon Yeom, Senior Solutions Architect, AWS; Kihyeon Myung, Senior Applied AI Architect, AWS

IND 3 4 5

Building privacy-aware generative AI applications in Financial Services

Public View

Attendee View

Financial institutions need to share sensitive documents across diverse roles while maintaining security and compliance. This includes junior analysts requesting summaries and compliance officers requiring complete audit trails. In this chalk talk, we'll architect a privacy-aware generative AI solution using Amazon Bedrock, Amazon Cognito, and Amazon Verified Permissions. Explore how Cedar policies and identity context enable dynamic content tailoring, ranging from redacted summaries to full access, while maintaining single-source documents. Discover design patterns for secure, personalized document sharing that scales across asset management, research, and audit workflows.

Chalk talk

Featured speakers: Piyali Kamra, Senior Solutions Architect, AWS; Jigna Gandhi, Senior Solutions Architect, AWS

IND 3 4 6

Building vertical AI agent blueprints in Financial Services

Public View

Attendee View

Financial institutions seek to build specialized AI agents for tasks ranging from fraud detection to algorithmic trading, while maintaining regulatory compliance. In this chalk talk, we'll collaboratively design agent architectures using AWS's AI capabilities and Amazon Bedrock. We'll walk through patterns for vertical financial agents and horizontal cross-domain capabilities, exploring how LangGraph, CrewAI, and Strands Agents enable sophisticated workflow orchestration. This session provides blueprints for accelerating AI implementation in Financial Services through reusable, production-ready agent patterns that deliver measurable business outcomes.

Chalk talk

Featured speakers: Vikram Elango, Senior AI/ML Specialist SA, AWS; Ankit Pathak, Senior GTM Specialist GenAI, AWS

IND 3 4 8

Create a secure card management platform with AWS Payment Cryptography

Public View

Attendee View

Learn how to build a secure, PCI-DSS compliant card management platform using the AWS Payment Cryptography Service across multiple AWS Regions. Explore HSM-backed cryptographic operations for payment card data, reducing compliance scope and operational overhead. See demonstrations of key exchange between HSM vendors and AWS, implementation of P2PE, crypto material generation, and transaction authorization. Discover patterns for secure API design, localized deployment for data sovereignty, and disaster recovery. Ideal for financial institutions, payment processors, and enterprises, this session shows how to leverage AWS's global infrastructure to build secure, scalable card management solutions that meet stringent security requirements.

Chalk talk

Featured speakers: Amit Khanal, Senior Solutions Architect, AWS; Sanjay Dwivei, Lead, FSI Prototyping and Cloud Engineering, NAMER, AWS

IND350

Chaos detective: Deploy generative AI-powered troubleshooting agents

Public View

Attendee View

When chaos strikes your cloud infrastructure, rapid incident response becomes critical for financial institutions. In this chalk talk, learn how to create a generative AI-powered troubleshooting agent that investigates and diagnoses system failures in real-time. Together, we'll design patterns using Strands Agents and Amazon Bedrock to interpret observability metrics and logs during critical incidents. Explore architectural approaches for prompt engineering, agent design, and system resilience. Leave with proven patterns for building GenAI agents that transform infrastructure troubleshooting—from initial detection through automated resolution.

Chalk talk

Featured speakers: Don Beery, SVP Head of Global Operations, Nasdaq, Hisyam Jukifli, FSI Prototyping and Cloud Engineering Solutions Architect, AWS; George Agiasoglou, Senior Solutions Architect, AWS

IND351

Design a multi-expert system for fraud investigation with AI agents

Public View

Attendee View

In this chalk talk, learn how to design a multi-expert AI system for fraud investigations. Discover the essential building blocks of an AI agent network using Amazon Bedrock and Amazon ECS. Together, we'll explore how specialized AI agents handle different investigation aspects, from merchant risk analysis to public search. We'll sketch out the orchestration patterns between custom and open-source Model Context Protocol (MCP) servers, design agent communication flows, and address critical considerations like security, scalability, and cost optimization. You'll gain practical insights into implementing generative AI solutions that can transform your fraud investigation workflows.

Chalk talk

Featured speakers: Ally Meringer, Solutions Architect, AWS; Shivanjani Pathipaka, Prototyping Solutions Architect, AWS

IND356

Mastering data chaos: Enterprise-scale catalogs for Financial Services

Public View

Attendee View

Financial institutions face overwhelming data complexity—managing thousands of tables, complex role hierarchies, and global access controls. Explore the challenges of managing data catalogs at scale in Financial Services, from usability and discoverability to data feed industrialization for generative AI. We'll share best practices, proven reference architectures, and lessons learned from the industry. Learn how to design a Catalog Manager service, a centralized proxy layer for AWS catalog operations that abstracts technical complexity through a self-service interface. Join this session to discover concrete strategies for streamlining data discovery and governance at enterprise scale.

Chalk talk

Featured speakers: Ignacio Fernandez Gonzalez, Solutions Architect, AWS; Paula Iglesias Ahualli, Solutions Architect II, AWS

IND 359

Navigating multi-Region AWS database choices for Financial Services

Public View

Attendee View

Financial institutions operate mission-critical systems across multiple regions to meet strict resilience and regulatory requirements. In this chalk talk, we'll examine AWS's expanded multi-region database portfolio through the lens of Financial Services workloads. Together, we'll compare Amazon DynamoDB Global Tables (both consistency modes), Amazon Aurora Global Database, and Amazon Aurora DSQL. Using real-world scenarios, you'll learn how each solution approaches data consistency in- and cross-Region, and the associated failover mechanics. Gain practical insights for matching these solutions to your specific application needs and resilience requirements.

Chalk talk

Featured speakers: Gerrard Cowburn, Principal Solutions Architect, AWS; Harsha Sharma, Principal Solutions Architect, AWS

IND 361

Scaling document intelligence: Advanced patterns with Amazon Bedrock

Public View

Attendee View

Enterprise document processing at scale requires robust patterns that handle diverse formats, ensure data quality, and maintain cost efficiency. This session explores advanced architectural patterns using Amazon Bedrock Data Automation for processing structured and unstructured documents across multiple domains. Learn how event-driven architectures can orchestrate document workflows, implement error handling and retry mechanisms, and optimize for cost and performance. Discover patterns for handling sensitive data, ensuring compliance, and building resilient pipelines that scale from thousands to millions of documents. Walk away with practical blueprints for enterprise document intelligence solutions.

Chalk talk

Featured speakers: Charles Meruwoma, Senior Solutions Architect, AWS; Adeleke Coker, Global Solutions Architect, AWS

IND 362

Scaling enterprise data operations with Amazon SageMaker Unified Studio

Public View

Attendee View

Financial institutions struggle to manage, govern, and consume data access for operations across multiple business units. In this chalk talk, explore how Amazon SageMaker Unified Studio enables enterprise-scale data operations across multi-account environments. Learn practical approaches to implementing automated data governance frameworks while enabling secure access for hundreds of users across business units. Together, we'll design proven architectures for domain structures, metadata management, and compliance-driven approval workflows. Discover strategies for streamlining subscription workflows and managing cross-account access patterns that accelerate data exploration without compromising security standards.

Chalk talk

Featured speakers: Duvan Segura-Camelo, Senior Analytics and AI Solutions Architect, AWS; Rajiv Upadhyay, Delivery Consultant, AWS

IND 365

Unifying data platforms for generative AI-ready financial systems

Public View

Attendee View

Financial institutions are transforming fragmented data environments to enable generative AI capabilities across their technology landscape. In this chalk talk, we'll architect solutions that integrate existing AWS native and AWS partners data platform with AWS Glue Data Catalog, AWS Lake Formation, and Amazon Bedrock AgentCore. Together, we'll walk through patterns using Iceberg REST API to unify metadata federation and create seamless data views across systems. Attendees will leave with a better understanding of architectural patterns that transform fragmented data environments into an intelligent, unified platform ready for generative AI at scale.

Chalk talk

Featured speakers: Misha Goussev, Principal Partner Solutions Architect, AWS; Adrianna Kurzela, Senior Partner Solutions Architect, AWS

IND 373

Agentic KYC: Autonomous customer screening for financial institutions

Public View

Attendee View

Financial institutions traditionally rely on time-consuming, manual review processes for Know Your Customer (KYC) compliance. Discover how autonomous AI agents can revolutionize KYC processes throughout the customer lifecycle, from onboarding to ongoing monitoring, by simultaneously orchestrating document verification, sanctions screening, and risk assessment. Explore practical implementation patterns for a multi-agent system using Amazon Bedrock AgentCore, Amazon Bedrock Data Automation, and AWS Step Functions to reduce processing time from days to hours while ensuring regulatory compliance. Dive deep into best practices for agentic AI system architectures that establish decision audit trails and explain autonomous compliance decisions to regulators.

Chalk talk

Featured speakers: Yaniv Gueta, Principal FSI GTM Solutions Architect, AWS; Chetan Sharma, Principal FSI GTM Solutions Architect, AWS

IND 374

Architecting multi-agent systems: Patterns in Financial Services

Public View

Attendee View

The evolution of generative AI has unleashed multi-agent systems capable of tackling complex financial tasks through distributed intelligence. This chalk talk explores how these systems revolutionize Financial Services workflows through collaborative problem-solving patterns—Sequential, Graph (Start, Hierarchical), Swarm (Mesh, Parallel), Loop, and composite patterns—applied to autonomous claims adjudication, automated financial research, and intelligent loan processing. We'll walk through how to design multi-agent architectures using Strands Agents and Amazon Bedrock AgentCore, enhancing decision-making capabilities, and addressing complex financial workflows. Gain practical knowledge to design efficient and scalable AI solutions using the proper reasoning-paradigm and collaboration pattern fundamental for multi-agent architectures.

Chalk talk

Featured speakers: Maira Ladeira Tanke, Tech Lead Bedrock GenAI Agents, AWS; Alfredo Castillo, Senior Solutions Architect, AWS

IND375

Best practices for optimizing Financial Services application latency

Public View

Attendee View

Optimizing latency in complex Financial Services software systems requires in-depth analysis and a comprehensive understanding of both infrastructure and software stacks. In this chalk talk, learn how to efficiently run latency sensitive workloads in AWS, leveraging core banking as an example. Explore ways to optimize communication protocols and network performance using generative AI and practical mental models. Join us for step-by-step architecture decisions and live demos showcasing system performance enhancements with the right AWS services. Walk away with actionable insights and ready-to-use optimization checklists to enhance the user experience, drive customer satisfaction, and improve your return on investment.

Chalk talk

Featured speakers: Max Ivashchenko, Senior Solutions Architect, AWS; Igor Ivaniuk, FSI Tech Lead, AWS

IND376

From pilots to production: LLMOps for Financial Services

Public View

Attendee View

Financial institutions are moving from generative AI pilots to production, but scaling responsibly requires more than traditional MLOps. Explore best practices for operationalizing large language model (LLM) workloads using Amazon Bedrock AgentCore and Amazon SageMaker, with architectures that enable reliability, governance, and compliance at scale. We'll dive deep into how to evaluate, deploy, and monitor genAI applications in production using prompt governance, multi-model orchestration, model drift detection, and automated testing pipelines. Learn how fine-tuning integrates with MLOps workflows to manage lifecycle, observability, and cost efficiency. We'll whiteboard real-world architectures and discuss how to design scalable, compliant, and auditable LLMOps systems.

Chalk talk

Featured speakers: Jorge Castans Garcia, Senior Prototyping Solutions Architect, AWS; Arnav Khare, Principal Solutions Architect, AWS

AIM 376

Advanced document processing with increased accuracy and compliance

[Public View](#)[Attendee View](#)

Discover how to build sophisticated document processing workflows using Amazon Nova and AWS Bedrock in this interactive chalk talk. We'll explore real-world applications across insurance claims, healthcare records, and financial document analysis—industries where manual corrections and processing delays increase costs. AWS experts will demonstrate advanced fine-tuning techniques, domain-specific customization strategies, evaluation frameworks, and production deployment patterns. Learn how to achieve 95%+ accuracy in document processing tasks by combining Nova's multimodal capabilities with Bedrock's integration and agentic workflows. Attendees will gain practical implementation approaches for scaling intelligent document processing while optimizing for cost, latency, accuracy, and compliance at scale.

API 319

Processing payments with real-time serverless architectures

[Public View](#)[Attendee View](#)

Traditional batch processes often introduce significant processing delays and lack the resilience demanded by modern business operations. In this session, we will demonstrate how adopting an event-driven paradigm can fundamentally remove the constraints and limitations inherent in traditional batch processing, enabling near real-time data processing and enhanced operational efficiency. Learn practical strategies and architectural patterns to transform your legacy batch workflows into agile, event-driven systems.

CMP 205

Quantum solutions driving enterprise value: From security to finance

[Public View](#)[Attendee View](#)

Join us to learn how industry leaders are researching and developing quantum applications with Q-CTRL and Amazon Braket. We will show you how Accenture Federal Services improved the performance of quantum algorithms for network anomaly detection by 3x using QCTRL's Fire Opal optimizer. Discover how hybrid approaches that combine quantum and classical computing on AWS can be applied to use cases in cybersecurity, finance, or materials science. Don't miss this opportunity to learn how your organization can get ready for quantum computing with Q-CTRL and Amazon Braket.

C O P 2 1 0

A practical guide for meeting regulatory resilience requirements

[Public View](#)[Attendee View](#)

Organizations worldwide must demonstrate their operational resilience to meet regulatory requirements like DORA, NIS2, and RegSCI. These regulations are aimed at ensuring organizations have incident detection and disaster recovery plans to prevent disruptions and maintain business continuity. In this chalk talk, you'll learn how to use AWS services to assess and prove your compliance in regulated industries like Financial Services and healthcare. We'll explore practical applications of the D-CAT tool, AWS Fault Injection Service experiment reports, resilience assessments in AWS Resilience Hub, and live dashboards in Amazon Application Recovery Controller to help you evaluate and document your regulatory readiness.

D A T 3 1 7

Microseconds matter: Architect ultra-low latency trading platforms

[Public View](#)[Attendee View](#)

Digital asset trading platforms demand high performance, ultra-low latency, and high availability infrastructure to address the 24/7 operational model of cryptocurrency exchanges and market makers. In this interactive session, we will live architect strategies to build solutions for high-frequency trading applications. Dive deep into best practices such as distributed state machines, and multi-AZ designs that improve scalability and high availability. Learn how to leverage differentiated capabilities such as Amazon EC2 Cluster Placement Groups and Amazon Time Sync Service's PTP Hardware Clocks to fulfill your low latency requirements on AWS.

H M C 4 0 2

Meet ultra-low latency and high throughput needs with AWS Outposts

[Public View](#)[Attendee View](#)

This session dives deep into the new category of accelerated networking Amazon EC2 instances on AWS Outposts, purpose-built for modernizing ultra-low latency and high-throughput mission-critical workloads such as core trading systems of financial exchanges, real-time market data distribution, telecom 5G infrastructure, and media distribution. Discover how bare metal networking works and how precision time protocol, L2 multicast, and other innovative features deliver the performance required by some of the most demanding on-premises workloads. Learn how to design and architect for continued operations under various disconnection scenarios to uphold the highest level of resiliency.

Workshops

Workshops are hands-on sessions where attendees work under the guidance of AWS experts to build a solution using AWS. Each workshop starts with a short lecture by the speaker, followed by solution-focused building support. Attendees must bring their laptops to participate.

IND 338

Automate analysis and extract intelligence from financial datasets

Public View

Attendee View

Join this workshop to build a unified platform for data, analytics, and generative AI using Amazon SageMaker Unified Studio. Through hands-on exercises, you'll architect a modern data lake that enables collaboration between data producers and consumers, implement multi-engine analytics with AWS Glue, Amazon Athena, and Amazon EMR Serverless, and create interactive visualizations with Amazon Quick Suite. Unlock the power of AI by deploying intelligent chatbots with Amazon Bedrock AgentCore that automate financial analysis. Gain practical expertise to build scalable data platforms that enable AI-powered solutions in financial services.

Laptops are required to participate in this session

Workshop

Featured speakers: **Bikash Behera**, Enterprise Transformation Architect, AWS; **Alseny Diallo**, Prototyping Solutions Architect, AWS; **Max Tybar**, Prototyping Solutions Architect, AWS; **Cory Visi**, Solutions Architect, AWS

IND 342

Build a multi-agent financial research assistant with Amazon Bedrock

Public View

Attendee View

Organizations across industries must synthesize insights from diverse, complex data sources. In this workshop, build a financial research assistant using Amazon Bedrock's multi-agent capabilities. You'll learn to design agentic workflows with Model Context Protocol (MCP) and multi-agent communication that orchestrate specialized agents for complex research tasks. Implement MCP-coordinated agents to process real-time market data feeds, regulatory filings, and unstructured analyst reports while integrating with Amazon RDS, Amazon S3, and external financial data providers. Your multi-agent assistant will demonstrate automated financial research workflows that maintain accuracy, compliance, and data security.

Laptops are required to participate in this session

Workshop

Featured speakers: **Cristina-Catalina Cazacu**, Technical Program Manager, AWS; **Jorge Castans Garcia**, Senior Prototyping Solutions Architect, AWS; **Jannis Kambach**, Prototyping Solutions Architect, AWS

IND 347

Combat financial document fraud with a multi-agent system

Public View

Attendee View

Financial institutions face mounting pressure to combat increasingly sophisticated fraud attempts more efficiently. In this workshop, you will build a fraud detection system leveraging multiple AI agents using the Strands Agents SDK to detect fraud in financial documents. Dive deep into a multi-agent architecture where specialized AI agents work together to compare metadata across documents, detect AI-generated forgeries, validate regional formatting, match documents against legitimate document patterns, and cross-reference documents with public sources. Learn to deploy a multi-agent assistant supporting investigators through each step of the document verification process.

Laptops are required to participate in this session

Workshop

Featured speakers: **Rim Zaafouri**, Solutions Architect; **Rafael Mosca**, Solutions Architect; **Vinit Sharma**, Senior Solutions Architect; **Ruben Afonso**, Solutions Architect; **Chiara Marzano**, Prototyping SA, AWS

AIM 4 1 3

Multi-agent financial fraud detection with Amazon Nova Models

[Public View](#)[Attendee View](#)

Master advanced AI system architecture by building a comprehensive financial fraud investigation platform using Amazon Nova's multi-agent orchestration capabilities. This workshop teaches participants to design sophisticated workflows where Nova Premier coordinates specialized agents: Nova Pro analyzes documents and transaction patterns, Nova Lite monitors real-time activities, and Nova Sonic conducts voice-based customer verification. Using synthetic financial data, participants create working systems for transaction analysis, identity verification, risk scoring, and automated case management. The session covers agent coordination strategies, model distillation for creating specialized fraud detection models, and performance optimization methods delivering immediate ROI for financial compliance operations.

Laptops are required to participate in this session

AIM 4 1 5

Smart agents meet documents: Building next-gen IDP architectures

[Public View](#)[Attendee View](#)

Discover how agentic AI accelerates intelligent document processing. Build powerful autonomous systems that understand and extract data from complex documents using Bedrock Data Automation (BDA), Strands Agents SDK, and Amazon Nova models. Through practical exercises, attendees will design AI agents capable of handling multi-format documents, making contextual decisions, and orchestrating end-to-end workflows. We'll cover key architectural patterns, integration strategies, and real-world implementation challenges for use-cases such as insurance claims processing, mortgage document analysis and more. Perfect for developers, architects, and product managers looking to transform their document processing capabilities with intelligent automation.

Laptops are required to participate in this session

DAT 4 4 8

Build a stablecoin payment processor using AWS serverless services

[Public View](#)[Attendee View](#)

In this session, build a stablecoin payment processing system using AWS serverless architecture. Through hands-on labs, implement digital asset workflows using AWS Lambda functions, secure critical transaction data with AWS Key Management Service, and design scalable Amazon DynamoDB data models for high-volume payment processing. You will implement robust and scalable mechanisms for handling blockchain events and create automated settlement processes. Also learn how to leverage built-in metrics from Lambda and DynamoDB to monitor invoice creation and payment confirmations. Prerequisites include experience with AWS serverless services and basic blockchain concepts. You must bring a laptop to participate.

Laptops are required to participate in this session

M A M 3 5 1

Implement low-code agentic finance analytics for SAP

Public View

Attendee View

In this hands-on lab, you will learn to automate SAP financial data processing and create dynamic dashboards using low-code, agent-based AI solutions through Amazon Q Business. You will begin by integrating MCP servers with SAP S/4HANA using a standard plugin within Amazon Q Business. Then, you will setup real-time cash flow analysis, daily cash reporting, and account settlement automation, and test the analytics by comparing real-time data against daily batch reconciliation reports. You will gain knowledge on using fully managed, low-code tools to enhance SAP business processes.

Laptops are required to participate in this session

Builders' sessions

Builders' sessions are small-group sessions led by one AWS expert providing interactive learning on how to build on AWS. Each builders' session begins with a short explanation or demonstration of what attendees are building. There is no formal presentation; once the demonstration is complete, attendees use their own laptops to experiment and build with guidance from the AWS expert. You must bring your own laptop to participate in this session.

I N D 3 3 4

Agent in an hour: Build an agentic app with Strands Agents and MCP

Public View

Attendee View

In this fast-paced session, create a fully functional AI agent that transforms the customer experience. Using banking as our example, we'll explore agentic AI with Strands Agents, delving into tool use, Model Context Protocol (MCP), and system prompt design. Through this process, you'll develop an innovative customer experience that leverages banking tools to manage accounts, credit cards, and loans. You'll work with Amazon Q Developer and prebuilt banking modules to fast-track development time. No matter your background, leave with a working agent and new understanding of how to create and configure AI-driven systems.

Laptops are required to participate in this session

Builders' session

Featured speakers: **Xavier Loup**, Principal Solutions Architect, AWS; **Stuart Loy**, Senior Manager Solutions Architect, AWS; **Xan Huang**, Senior Solutions Architect, AWS; **Andrew Michitson**, Director, Solutions Architecture, AWS; **Ksenia Wahler**, Senior Manager Solutions Architect, AWS

I N D 3 4 4

Building multi-Region financial transaction systems with Aurora DSQL

Public View

Attendee View

Financial institutions require operational reliability and international connectivity to process millions of daily transactions across time zones. But maintaining global consistency, data integrity, and availability is complex. Learn how to deploy a robust multi-region financial transaction processing system with Amazon Aurora Distributed SQL. We'll walk through how to set up active-active architectures that leverage Amazon Aurora's distributed features to ensure high availability, data consistency, and minimal latency globally. Attendees will gain hands-on experience setting up multi-region deployments, managing distributed transaction consistency, and optimizing global performance. You'll walk away with the knowledge to reliably manage global transactions at scale.

Laptops are required to participate in this session

Builders' session

Featured speakers: **Lukasz Panusz**, Solutions Architect Leader, AWS; **Paweł Zawadzki**, Senior Solutions Architect, AWS; **Rajesh Kantamani**, US Specialist Senior Solutions Architect, AWS; **Paweł Moniewski**, Enterprise Solutions Architect, AWS; **Julia Chorzelska**, Solutions Architect, AWS

I N D 3 5 3

Documents to decisions: Agentic underwriting with Amazon Bedrock

Public View

Attendee View

In this session, participants will learn to build an agentic generative AI underwriting workflow on AWS that automates the evaluation of underwriting risk—turning life insurance submissions into explainable risk assessments and recommended actions using Amazon Bedrock, Amazon Bedrock AgentCore, and the Strands Agents SDK. Explore how agents coordinate retrieval, apply underwriting guidelines, and explain their reasoning end-to-end—producing transparent risk scores and suggested next actions. By the end of this session, you'll have a working prototype and repository that turns raw submissions into auditable risk assessments with patterns you can reuse for production.

Laptops are required to participate in this session

Builders' session

Featured speakers: **Tony Howell**, Solutions Architect, **Alfredo Castillo**, Senior Solutions Architect, AWS; **Joe Morotti**, Senior Solutions Architect, AWS; **Lijan Kuniyil**, Enterprise Technical Account Manager; **Trisha Jaggi**, Associate Solutions Architect, AWS

AIM337 (Code talk)

Agentic AI for member-owned financials: Systems that serve

[Public View](#)[Attendee View](#)

Credit unions and insurance organizations can leverage AI agents for automating complex workflows. In this code talk we'll demonstrate going from concept to production with spec-driven development. We'll work backwards from your business processes such as lending automation, claims processing, and fraud detection to turn prompts into detailed specifications, code, documents, and tests. Using prompts as code, we'll build production-ready agents using Strands Agents SDK and AWS services. Attendees will leave equipped with implementation tools, sample code, and best practices for building and deploying agentic AI solutions that transform credit union and insurance operations while ensuring explainable, compliant AI decision-making.

Laptops are required to participate in this session

ANT408

Data analytics for financial organizations with Amazon SageMaker

[Public View](#)[Attendee View](#)

In this hands-on workshop, learn how financial institutions can create value using Amazon SageMaker to build, scale, and govern end-to-end data analytics and ML workflows. Work with a banking use case covering customer segmentation, fraud detection, churn prediction, personalized communication and document processing. Experience how data analysts, data engineers, and data scientists collaborate on one platform using purpose-built tools and integrated workflows.

Laptops are required to participate in this session

ANT415

Securely monetize your data with Amazon Redshift

[Public View](#)[Attendee View](#)

Transform your payment data from cost center to revenue driver through advanced AWS analytics with Amazon Redshift and AI services. This hands-on workshop demonstrates how payment processors can build sophisticated data monetization platforms to generate new revenue streams while maintaining PCI DSS compliance

Laptops are required to participate in this session

CMP 406

HPC infrastructure for Financial Services using AWS Batch and AWS CDK

[Public View](#)[Attendee View](#)

Take your HPC infrastructure as code skills to the next level with AWS Cloud Development Kit (CDK). In this Builders Session you'll use CDK to implement an HPC architecture using AWS Batch and run a sample Financial Services "Risk Analysis Grid" workload. This session is for experienced HPC practitioners beginning their AWS infrastructure as code journey, and AWS builders who are new to HPC and AWS Batch.

Laptops are required to participate in this session

CNS 325

Master distributed transactions: Orchestration with AWS Step Functions

[Public View](#)[Attendee View](#)

In this hands-on session, dive into implementing distributed transactions using AWS Step Functions. You'll build a payment processing workflow using saga pattern that orchestrates multiple serverless microservices. Learn to handle both successful transactions and rollback scenarios while maintaining data consistency. Through guided exercises, you'll implement compensation mechanisms, handle partial failures, and monitor transaction flows across distributed services. You'll leave with practical experience in building resilient distributed systems and understanding how to observe and troubleshoot saga patterns on AWS.

Laptops are required to participate in this session

DAT 407

Create an intelligent banking agent using Aurora DSQL & MCP

[Public View](#)[Attendee View](#)

Model Context Protocol (MCP) enables AI agents to communicate with data systems to retrieve data and perform tasks. Amazon Aurora DSQL is a serverless, highly-available relational database that enables multi-Region active-active architectures, making it perfect to support financial industry use cases, which require the highest levels of resilience and accuracy. In this session, you will build a banking AI agent application, allowing end users to fetch account balances, pay bills, and transfer money using natural language prompts, and leverage MCP to interact with a banking data set stored in Aurora DSQL. You must bring your laptop to participate.

Laptops are required to participate in this session

DAT457 (Code talk)

Autonomous Web3 agents on AWS

[Public View](#)[Attendee View](#)

In this code talk, we will demonstrate how to leverage Amazon Bedrock AgentCore and Strands Agents SDK to build a crypto AI agent that can query real-time and historical blockchain data to perform analysis, execute on-chain transactions using integrated wallets, and more. Learn how to build an agent programmatically that can retrieve data from topic-specific knowledge bases, query historical public blockchain data provided by Open Data on AWS, query for real-time data, and sign blockchain transactions with AWS KMS.

Laptops are required to participate in this session

TNC318 (Interactive training)

Deploy agentic AI application with Strands and MCP on Amazon EKS

[Public View](#)[Attendee View](#)

Build an enterprise-grade financial analysis platform by integrating Strands Agents and MCP on Amazon EKS. Learn to deploy and configure MCP servers, set up Strands Agents, and integrate financial data within a containerized environment. Experience hands-on implementation of scalable AI applications combining natural language processing with advanced tool invocation capabilities.

Laptops are required to participate in this session

Financial Services segment guides

Access these two-page guides highlighting sessions with a specific focus on [Banking](#), [Payments](#), [Capital Markets](#), and [Insurance](#) to help you navigate re:Invent.

Welcome to re:Invent 2025!

This year we've seen generative AI become more mainstream, with banks adopting services to optimize operations, fight fraud, and accelerate modernization efforts.

As always, there are too many interesting sessions to pick from, but I hope you'll prioritize the sessions I've included here as you plan your agenda.

I hope to see you there, and wish you a productive, informative, and fun re:Invent!
